ICL-Sinclair new micro

ICL's One-Per-Desk project — its much rumoured new micro, based on Sinclair's QL technology, is to be launched on November 16.

The machine, which uses the QL circuit board at its heart, includes a built-in modem and terminal emulation software, together with a monitor.

One-Per-Desk will also use the QL's microdrives and be supplied complete with the Psion *Xchange* software suite — the up-graded business versions of *Quill, Easel, Archive* and *Abacus* available on the QL — built in on Rom.

The whole package is expected to sell for around £1,200, and will be marketd under the ICL name.

●Psion is at present negotiating with Acorn Computer Group to convert its *Xchange* suite of programs for the new Acorn ABC machines.

Discs for QL

QUEST Automation has announced the QL Executive Series — an ambitious range of peripherals for the Sinclair QL, including floppy disc drives and a Winchester hard disc drive.

The Shugart-based 5¼ inch floppy disc drives begin with a single 200K drive at £249. Single 400K and 800K versions are £359 and £425, with dual 400K and 800K models at the top of the range at £499 and £599 respectively. Interfaces and power supplies are included in the prices.

Quest believes that the addition of disc drives for the QL makes the machine much more attractive for serious business

Chiller catches cold

MASTERTRONIC has been forced to change the music featured on its C64 game *Chiller*, based on the Michael Jackson video *Thriller*.

The software company received a solicitors letter from Rocksoft, a new company set up to protect music publishers' rights in the computer software field. Rocksoft had gained licensing rights to the *Thriller* music, and pointed out that Mastertronic's use of the music was unauthorised.

"When we sent the solicitors letter, Mastertronic capitulated immediately, and a substantial out of court settlement was agreed," said Martin Humphrey, Rocksoft's general manager.

Martin Alper of Mastertronic commented, "We would have liked to have contested Rocksoft's action, but a lengthy court proceeding would have meant we would have had to withdraw *Chiller* from the market, even if only temporarily. Instead, we have agreed to pay a royalty for all *Chiller* copies sold so far — it is *not* an out of court settlement — and all future productions of the game will have completely different music, composed in-house."

Rocksoft, a subsidiary of Spectrum Group, which also owns Statesoft and Micro Dealer UK, has gained licensing rights to a number of pieces of music including Beatles songs and *Chariots of Fire*.

"We have basically set up as a licensing company to stop the flagrant disregard of the Copyright Act," continued Martin Humphrey, who spent seven years as managing director of Island Records before joining Rocksoft. "We hope to build up a kind of copyright consultancy to help software houses gain legitimate rights to music."

In the immediate future, however, Rocksoft is negotiating

People write in occasionally to complain that *Popular* is turning into a games magazine.

Quite the contrary, I hope, but even so a considerable amount of positive discrimination in favour of non-games material has be be exercised.

Of the 107 home computer packages released in the last three weeks 87 are games, eight are education programs, four are programming utilities and only eight provide serious applications for home micros.

I can't believe that this break-down accurately reflects the uses to which people put their micros. More it reflects the fact that the software companies have had a lean year and are playing safe. Games *do* sell and it is easier to produce another platforms-and-ladders game than ■ ■ to write a decent word-pro package.

Moreover, the situation serves to point up a serious problem faced by the micro manufacturers. Any machine priced under £300 automatically becomes a games machine — a situation created entirely by the independent software houses.

Commodore's Plus/4 represents a second attempt to produce a machine which will sell to the 'serious' user. Everything was going fine with its Commodore 64 model until its price came down from £350 to £199. Then suddenly the machine was tagged with a games image.

Why do you suppose that Acorn resolutely holds the price of its BBC at £399 (well, it's part of the reason)? And why do you suppose Sinclair didn't give the QL a cassette interface? Programs now coming out for the QL like Sagesoft's accounting suite and Quest's *Tally* programs are exactly the ones Sinclair wants.

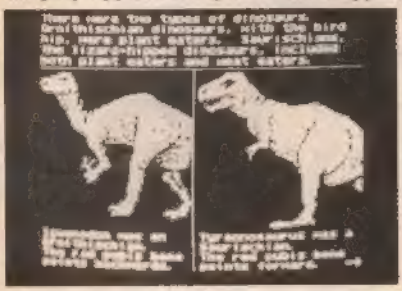
Epyx on the way from CBS software

CBS RECORDS has set up a new UK software division, CBS Software.

CBS Software has signed a licensing agreement with US company Epyx, covering the UK and Europe, and will also be importing the range of programs already produced by CBS in the States.



***Dinosaur Dig*, one of the educational programs from CBS's US division**

"Under our agreement with Epyx, we will be launching eight games in November," said Brian Hyams, general manager of CBS Software. "*Silicon Warrior, Jump Man, Pit Stop, Temple of Apshai, Breakdance, Impossible Mission, Lunar Outpost* and *Dragon Riders of Pern* will all be brought out initially for the Commodore 64.

"We hope to convert them to the Spectrum in time, and possibly to the BBC and MSX as well. Epyx's *Summer Games* would be included in the list had we not licensed the title to Quicksilva some months back."

Imports from the CBS label in the US will follow, and will be largely educational programs for the ▪ — *Ducks Ahoy, Seahorse, Hide 'n' Seek* and the *Success with Maths* series are all ear-marked to be made available over here.

Prices will be £8.95 on cassette and £11.95 on disc.

All change at Tansoft

ONLY weeks after two Oric directors, Barry Muncaster and Paul Johnson, bought out Oric software house, Tansoft, three senior Tansoft executives have left the company.

Paul Kaufmann, Cathie Burrell and Geoff Phillips have set up a new software company, based in Bedfordshire, called Orpheus Software.

Tansoft developed from Tangerine, the company that originally designed the Oric 1 computer. Tansoft supported the Oric machines with software but were planning to diversify to provide titles for other micros before the company's takeover by Barry Muncaster and Paul Johnson.

"The split between us and Tansoft is amicable," said Paul Kaufmann. "There is no acrimony involved. Tansoft wanted to do things differently from the way Orpheus now has plans to operate — for example, the conversions to other machines.

"At Orpheus we are currently working hard to get products out for Christmas. At the end of November, we will be bringing out three — as yet untitled — arcade games for the Atmos, followed by programs for the Spectrum, Commodore 64, MSX and Amstrad." A Spectrum adventure called *Underworld — the Village* is set for release before Christmas. For the Commodore 64, Orpheus intends to concentrate on utility programs. "The company is also developing a business software diversion to serve machines such as the Sirius and Apricot range.

"Orpheus has obtained financial backing from two private investors, one in this country and one in France — we plan to develop a high profile in France."

Tansoft is now being headed by Adrian Rushmore, its former marketing manager: "After the reshuffle when Barry Muncaster and Paul Johnson took over, the existing directors were placed in an awkward position, since they no longer had the same degree of authority," Adrian said. "They left by mutual consent, but we're all still friends.

"Tansoft's plans to diversify to other machines have now been put back for about five to six months and now we are concentrating our support on the Atmos."

Quest

Continued from page 1

purposes: "Quest investigated possible enhancements for the QL, and found great potential for add-ons," said managing director Tony Earl. "Microdrives, for instance, are widely believed to be varying in reliability."

The company has also launched its CP/M-68K operating system for the QL, licensed from Digital Research. It will be available both on floppy disc at £49.50 and microdrive cartridges at £79.50.

Quest also launched four separate memory expansion packages for the QL, fully buffered and based on 64K DRam modules. The 64K Ram board costs £99.00, an extra 128K memory will cost £159.00, with 256K at £299.00. Top of this range is a 512K memory expansion at £499.00. With the memory board expansions, Quest has announced an Expansion Console, which will take up to four expansion cards, and provides an add-on power supply.

On the software side, Quest has worked closely with Psion, authors of the software packages bundled with the QL, ▪ produce *Tally I* and *Tally II*, sophisticated accounts packages.

Tally is an integrated system and data can be exchanged between *Tally I* and *II* and also with Psion's *Quill, Archive, Easel* and *Abacus* packages.

Tally I comprises sales ledger, sales invoicing and stock control facilities; *Tally II* provides purchase ledgers and nominal ledgers. *Tally I* will cost £99, and *Tally II* £50.

The two *Tally* programs are also being made available as a single package running under CP/M-68K — the Padmede Accounts Software — ▪ £149.

The entire range of QL peripherals and software should be available from the middle of next month.

Chiller

Continued from page 1

with software houses for a game based around the Beatles song *Yellow Submarine*, and looking closely at Konami's *Track and Field*, which is thought to use a version of the theme tune from *Chariots of Fire* as its backing track, and *Jet Set Willy*, which uses *If I Were a Rich Man*.

DIY robots from Fischer

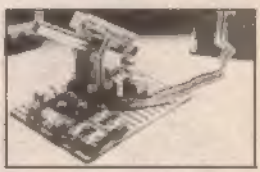
ARTUR Fischer has brought out a robot building kit as part of its Fischertechnik educational toy system.

The Fischertechnik Computing package contains all the components needed to construct six different robots.

They range from a simple sorting machine to a single robot 'arm' and a tracking mechanism which keeps a solar cell in the correct alignment with the path of the sun.

In addition to the building parts, the kit also contains all the necessary electrical components — motors, potentiometers, microswitches and an electro-magnet.

The Computing kit costs £64.95. Home micro interfaces for the BBC, Spectrum and Commodore 64, ▪ allow the robots to be externally controlled by computer are also available, although not included in the package. Fischer supplies an interface made by Unilab for £50 for all three machines.



Interfaces from Microbotics (around £30) and Economatics (around £60) are also suitable.

Details from Artur Fischer (UK) Ltd, Fischer House, 25 Newtown Road, Marlow, Bucks.

Sparks fly at Thorn-EMI

THORN-EMI Computer Software has laid off its entire in-house Creative Sparks programming staff.

All future Creative Sparks releases will be commissioned on a freelance basis, while previously 70% of releases were originated in-house. The programmers' offices at Wardour Street, London, will be closed down, and Creative Sparks will be run from Thorn-EMI's premises in Farnborough, Hants.

"Running an in-house programming team of twenty-plus people was just uneconomic," explained Creative Sparks' Gordon Reid.

"The overheads were massive, and a number of the programmers wanted to work freelance in any case. Most of them will continue to work for us on a licensed basis. All the ex-programmers will continue to receive royalties for the games they worked on while at Thorn-EMI."

Adam drops

US MICRO manufacturer Coleco Industries has announced a substantial price reduction for its Adam home computer.

The price has been dropped from $650 (about £540) to $475 (about £400).

The move has fuelled continuing speculation in the US press that Coleco may discontinue the Adam after Christmas. Coleco denies that it has any plans to drop the machine.

Sinclair expands

SINCLAIR is expanding its overseas operations.

It has established a new, wholly owned subsidiary in Paris — Sinclair Research France, and an Italian company — as a joint venture with Sinclair's Italian distributors — GBC Italiana.

Sinclair Research France will be headed by the principal shareholders at Direco, Sinclair's French distributors.

Wellington on the move

GAIL Wellington, Commodore UK's Software development manager, has been appointd as the first member of a new European project team set up by Commodore.

The project team will be developing and co-ordinating a new range of hardware and software for the European market, with the emphasis on business systems. Commodore's new IBM compatible Commodore PC and Z8000 machines, scheduled for production next year will spearhead Commodore's drive into the business market.

Gail will be heading the new team, based in new Commodore offices in Berkshire.

Longman go for MSX

LONGMAN Software, perhaps best known for its educational programs, has announced a range of games for MSX and the Commodore 64 for Christmas.

Arcade games *Hot Shoe* and *Oh Mummy* will be available for the MSX range at £5.95. Four arcade games will be launched for Commodore 64 on cassette at £7.95 — *London Blitz*, *Legionnaire*, *Andromeda Conquest*, and *Telengard* — and a fourth, *Ripper!* on disc only at £12.95.

Longman has also converted three of its educational titles on to MSX — *BMX Number Jump*, *Word Wobbler*, and *3D Hypermaths*, again at £5.95 each.

All titles should be available next month.

Free ticket offer

250 free tickets

for the 14th ZX Microfair

Popular Computing Weekly is giving away 250 free tickets for the 14th ZX Microfair — to be held at Alexandra Palace on 17-18 November — to the first 250 people who submit programs for the ZX Spectrum or QL for possible publication in the magazine **before November 12.**

All you have to do for your free ticket, valid for either one of the two days of the show, is to enclose a stamped addressed envelope with your program submission.

Remember — the tickets go to the first 250 people to send in a program and the offer applies only to programs received by us **no later than midday on November 12.**

Seeing is believing

See the pack – see the screen – see the game. See the difference the moment you pick up one of the games from Firebird's new Silver Range.

The difference is that our packs show the high quality you'll see on the screen when you play, so you know exactly what you're buying.

The same high standard applies to all twenty games in the range and all are available at the remarkably low price of

£2.50

firebird

SOFTWARE

Here's a sneak look at three of the NEW games:

BOOTY

Feast yer eyes on the BOOTY-ful treasure stored in 20 holds.
There be pirates, parrots and fun galore!!!

THE WILD BUNCH

Can you survive life on the run in this Wild West adventure???

BIRD STRIKE

Dodge the planes and shoot the pigeons to complete the tune –
then move to the next level.

Look out for these games in the FIREBIRD silver range at selected high street stores.

SPECTRUM: THE WILD BUNCH · BOOTY · MR. Clean up your stu

Do you have almost as much paperwork at home as you do at the office?

Is your household budgeting system beginning to assume the complexity of the National Debt? And your filing system now so chaotic that you need another filing system to find anything in it?

Are you a club secretary or member of the PTA drowning beneath a deluge of subscription reminder letters and invitations for sponsored walks?

The answer is the new Commodore Plus/4, the computer specially designed for the office at home.

It has the four most commonly used (and useful) software programs actually built into the computer.

Just touch a key and they're all ready to clean up.

There's an information storage and retrieval filing system (Database), word processing for letter

FOR FURTHER INFORMATION ON THE COMMODORE PLUS/4 COMPUTER · ITS COMPLETE RANGE OF PERIPHERALS · PLUS GAMES AND EDUCATIONAL SOFTWARE · PLEASE

dy once and for all.

and report writing, a financial analysis program to help you control your budget (Spreadsheet), and a graphics program to translate complex figures into easy-to-understand graphs.

Once your study is spick and span, then you can take advantage of the Plus/4's other features.

These include the use of advanced BASIC (a more sophisticated, yet simpler form of BASIC), a unique Help key so you can quickly identify programming errors, a large 64K memory (with an astonishing 60K available for use), and a real typewriter keyboard.

And all of that is yours for just £299.99. A small price to pay for clearing up your study.

Pirate copies

Since reading your article in the August 30 issue concerning pirated software in Portugal I have realised that most — if not all — of the software titles are pirate copies.

The problem with software in Portugal is price. If the software companies were legitimate the programs would reach Portugal at astronomic prices. To put things in perspective, for £6 here we can go to the cinema six times or have two substantial dinners at a good restaurant.

At those sorts of prices, I doubt if the software companies would sell much software.

If the software companies reckon they are losing so much money in my country because of piracy, why don't they join together and compete with the pirates on price.

Another reason is that, for anyone making a home tape-to-tape copy, there is no established mechanism whereby the copier can send a donation to the relevant software house. Many of the programs out here are not easily obtainable as a legitimate title.

Since your August issue I haven't purchased any more pirated copies or made home copies without sending a letter to the company concerned. The one program I did copy, I sent a letter to the software house concerned, but I am still waiting for reply.

QL versus BBC

So...According to Phil Rogers in *Peek & Poke*, October 12 issue, the QL is more powerful than the BBC.

The BBC is old-fashioned because it has too many chips? I suppose Phil Rogers will soon be going around telling youngsters that main-frame computers are old-fashioned because they have too many chips as well. Sinclair has the idea that everything he can't do in hardware can be got round using software. I don't mind. If he wants to go ahead and produce a 16-bit computer which operates at the speed of a 7-bit then he can go right ahead. It's fine by me.

The BBC micro is faster than the QL mainly because it has more chips inside it. The QL, on the other hand, is the slowest 16-bit computer I have ever come across. And the QL is a lot more powerful? Ever heard of expansion — little things like Z80, 6502 and 16-bit second processors and Unicorn? And, what about the QL's windowing facility and multi-tasking? I'd be interested to see *one* QL program which uses windows and multi-tasking.

One day in the future (Sinclair's favourite word), Sinclair Research will produce a computer that will actually be expandable.

A proper keyboard

What is this I hear? A spokesman for Uncle Clive saying 'Sinclair Research are listening to all the people who say that the Spectrum needs a good keyboard? Does it really take two years for them to hear?

If your needs dictate that you should have a proper keyboard then there is already a good choice of add-on 'professional' keyboards available for the Spectrum at prices ranging from £30 to £80.

As a Spectrum owner I would like to see the Spectrum+ do well — it's a good machine with lots of excellent software. But somehow I fear that Uncle Clive may have opened his ears too late.

"They're playing our tune!"

J Jago
Flat 4
238 Royal College Street
London NW1

Forgotten QL owner

Have I been forgotten? I have a QL (I suppose I should be grateful for that) but it is still with the monstrosity stuck in the back.

No recall letter has yet been received from Sinclair and as they were due to have recalled all the 'dongled' QLs by the end of August I am beginning to wonder if they have lost my address.

Is there anyone else in the same boat? I was patient enough waiting for the machine with all its faults — how much longer must I wait for the corrected version?

Richard Chambers
21 Chadwell Springs
Waltham
nr Grimsby
S Humberside

According to Sinclair, all the Rom refit vouchers should have been sent out weeks ago. If for some reason yours has gone astray you should get in touch with Sinclair's Customer Services Department and ask to be sent another voucher straight away.

Spectrum versions

I am writing in response to M Payne's letter printed in the August 2 issue, concerning Phil Rogers' article about determining the different versions of Spectrums.

By using Print In 16602, 255 is returned if the Spectrum is an Issue 2, as my micro is. If, however, Interface 1 is fitted then 63 is returned. Issue 3 Spectrums return 1891 when Interface 1 is connected. Finally, Issue 2 Spectrums give a figure of 0 if the Protek joystick interface is connected.

Grub

Munch your way through the biscuits but avoid the crosses in this game for the Vic20 by Paul Jones

In this game for the unexpanded Vic 20, the player controls a mouth, using keys W for up and X for down – or by using a joystick.

The idea is to eat apples, lemons and biscuits that appear on the screen, while avoiding the deadly crosses. Apples score 10 points, lemons one point, while biscuits clear the screen. Eating across causes the loss of one of the players' three lives.

This program makes full use of all the Vic's features, including colour, sound and user defined graphics. It also demonstrates sliding screens which provide some interesting effects. Full playing instructions are provided in the program.

Program Notes

Line Numbers	
0-7	Initialisation
10-55	Prints food and crosses
100-310	Main loop
1060-1100	Sees what's being eaten

First, a question.

Who do you think are the world's most avid consumers of microcomputers?

The ingenious Japanese? The fashionable French? The acquisitive Americans?

Believe it or not, it's we British who own more micros per person than any other nation on earth.

Yet, despite its amazing impact, the microcomputer has only just begun to scratch at the surface of our lives. Without doubt, the best is yet to come.

Use and Abuse.

In several recent surveys, some astonishing facts about micro use and abuse were revealed.

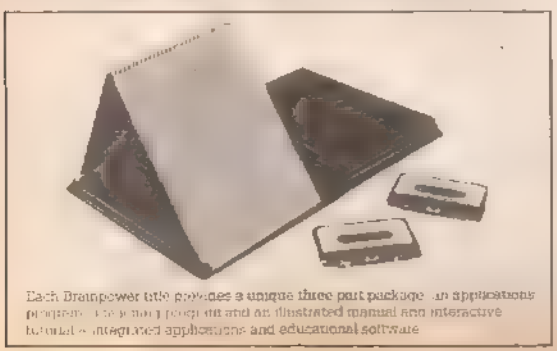
It was discovered that the micro is hopelessly under-utilised. If you're already a micro owner, your own experience may well confirm this unhappy state of affairs.

Brainpower. A source of knowledge.

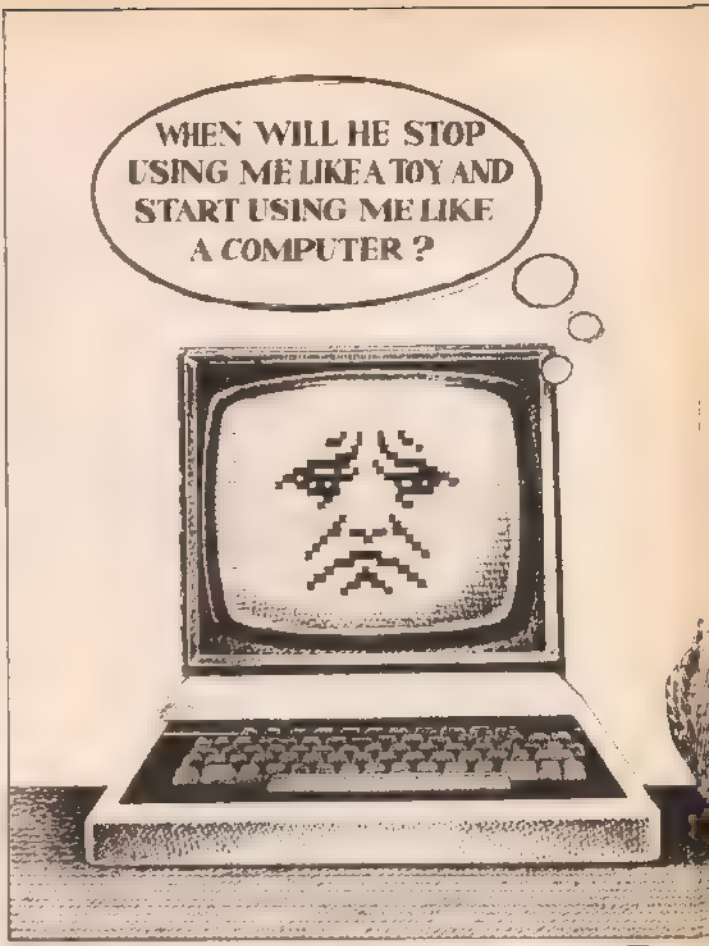
For thousands of years, the key to self improvement has been in the hands of the written word. Now, thanks to the Brainpower range, it's very much in the hands of the micro.

As the Brainpower range demonstrates, this does not require prior knowledge of micros, or how they work.

The Brainpower concept has been devised as *integrated* applications and educational software. And its aim is to stretch both your mind and your imagination.



Each Brainpower title provides a unique three part package - an applications program - the micro concept unit and an illustrated manual and interactive tutorial - integrated applications and educational software



Now you and y bring out the be

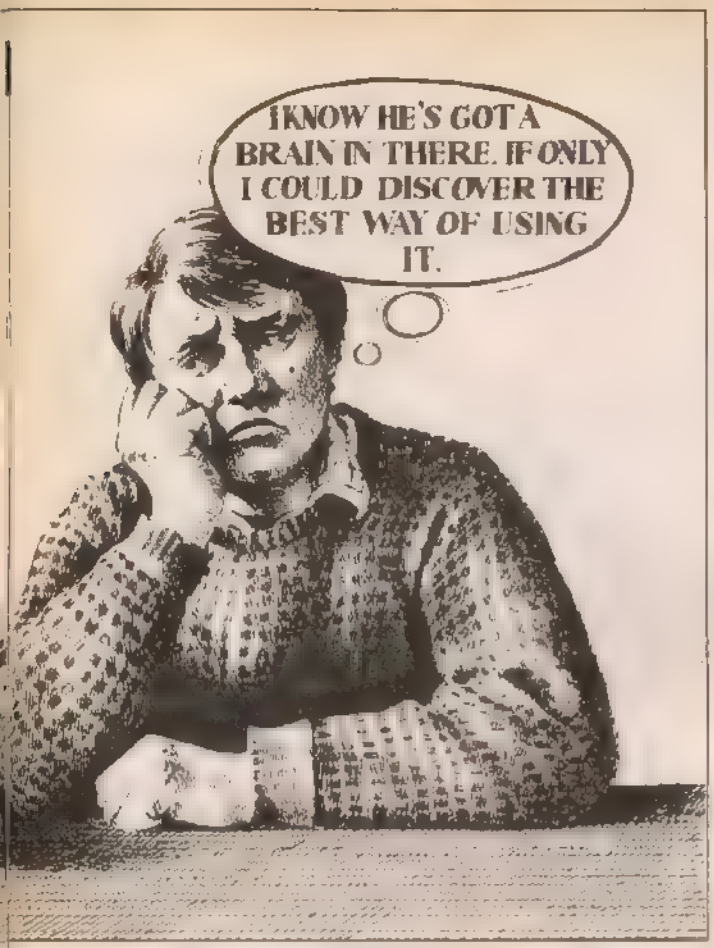
It offers a unique way to realise your own full potential and that of your micro. In ■ way you could never hope to achieve from the printed word alone.

In this respect, the Brainpower range stands on its own.

A unique concept.

All the Brainpower titles share one thing in common, apart from their stimulating subject matter, that makes them unique.

You will find each title comprises three distinctive elements: A teaching program that helps you to get to grips



your micro can est in each other.

with the subject at your own pace. An applications program to put what you learn into action. And finally, with each package, you get an expertly written book and interactive tutorial.

STAR WATCHER

The secrets of the heavens are yours. Isolate all the constellations as well as main stars for easy identification. Even turn stars and constellations on and off at will. Screen by screen, you will see exactly how the 1,500 brightest stars move through time and space. And all from any point on the Earth's surface at any time of the year.

Star Watcher is without doubt the definitive home observatory.

DECISION MAKER

Should you buy a new house? Change jobs? Have children? Start your own business? Such decisions should not be taken lightly. Armed with Decision Maker, you can be quite sure of examining every avenue, and arriving at a rational structured answer.

If you value the way you run your life, you need Decision Maker.

NUMBERS AT WORK

Tackle all the number problems you're likely to face in daily and business life. From straightforward multiplication and division of fractions, through decimals, percentages, ratios, mark-ups and margins to compound interest, depreciation, VAT and PAYE.

Numbers at Work gives you a distinct edge, since you will be able to both understand and manipulate numbers at will.

PROJECT PLANNER

Project Planner teaches you how to divide even the most complex project down into meaningful components. Learn how to determine the length and importance of every single task, and those elements critical to the fulfilment of your plan. Even anticipate problems you hadn't envisaged.

You have the measure of any situation because you have the fullest possible grasp of all the factors which affect it.

FORECASTER

Forecaster takes the guesswork out of forecasting, by accepting that tomorrow's events will be best predicted on the basis of today's facts. Armed with Forecaster, sales targets and growth trends, even sporting events and election results can be accurately and very quickly predicted.

Invaluable to you in both your private and business life.

ENTREPRENEUR

Entrepreneur teaches you all the steps required to plan and start your own business. It will forecast your first 18 months' cash flows, generate your Profit and Loss Account and Balance Sheet. Help you in discussions with your bank manager and partners. Explain the notions of assets, liabilities, overheads, working capital, cash flow and break even point.

Invaluable if anyone who is planning a business venture.

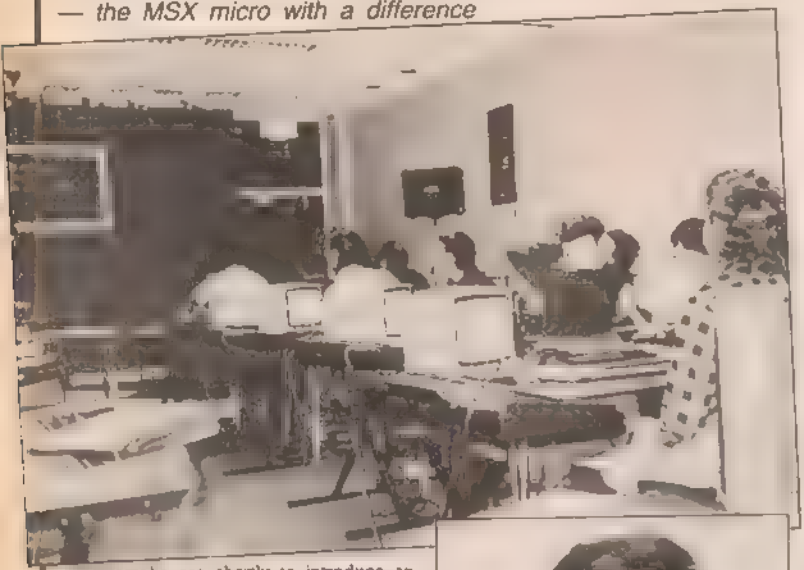
BRAINPOWER

A sound education

***Graham Taylor** talks to Yamaha's Martin Tennent about the CX5 — the MSX micro with a difference*



Yamaha are shortly to introduce an MSX computer that will play MSX games, do word-processing, and generally another one of the bevy of similar looking machines due around Christmas.

The machine — called the CX5 — has 32K and costs around £500. Don't laugh yet.

Last week Martin Tennant — the man in charge of the Yamaha micro's launch — introduced the CX5 to a group of 20 or so specially selected dealers: "What we are selling is a music synthesizer which just happens to also be an MSX computer — that is the way we are marketing it and that's what you are selling."

In a curious way he seems to characterise the whole approach Yamaha are taking to the launch of the machine. He has found out about computers, and their games, only fairly recently. His interest is clearly in music not micros and he has the enthusiasm of a student teacher greeting his first receptive class when he explains the machine.

The word that comes to mind when trying to explain the way Yamaha view the launch of the CX5 in the country is *paternal* — quite simply Yamaha wants to educate people through its dealers into buying not another MSX micro — but a *music* computer.

There are two problems the CX5 faces. The first is that people really will have to learn something about music to be able to use it to the full. The second is that the machine is so much more sophisticated than anything currently available it inevitably requires considerable explanation.

Yamaha have tagged the CX5 a music computer — and the reason is perhaps best explained by what it can do.

Firstly, the CX5 comes complete with an add-on music keyboard and has built into it the approximate equivalent of a DX9 synthesizer — for those not familiar with this instrument it costs around £800 and is capable of creating astonishingly life-like, ie, music instrument-like, sounds.

However, this synthesizer in the CX5 is completely under computer control so that it can be programmed using cursor and TV screen rather than fiddling with lots of buttons. More important still, using Yamaha's *Composer* program you can write music on to music staves with almost every sort of conventional music notation — latin terms, diminuendo ties, accents, staccato etc, and to use eight different impressive voices. The musical possibilities of the machine are tremendous, yet the whole thing, complete with a mini-music keyboard, costs under £600.

Martin explained, "Last year when we launched the DX7 which got rave reviews everywhere in the music press we were inundated with orders, we simply couldn't supply them and it was bad for our image. With the CX5 we are experiencing a similar demand and we need to make sure we don't repeat the mistakes with the DX7."

Yamaha's solution is to limit the supply of the machine to a small number (around 50) of specially selected 'high tech' dealers — music shops that have the facilities to adequately demonstrate and explain what the CX5 can do. More than that, representatives from each of the dealers are required to attend a two-day course at Yamaha's base near Milton Keynes.

Over the two days the dealers at one such course which I attended — in groups of about 20 at a time — are shown the machine and have to use it to input programs, design sounds, and write music in several parts — in short, they have to master the chief features of the machine. There's even a small exam they have to pass at the end of it.

"The exam is really only to check that they've got the basic details right — so far no-one has actually failed — although one person did come very close."

What would happen if someone did fail it, I asked. "Well, they wouldn't get support from Yamaha until they managed to satisfy us they knew what they were doing — we'd probably wait a few months and review the situation."

The Yamaha approach is certainly different from that of the other MSX manufacturers. It must be the only company with an MSX computer to have actually refused to supply Dixon's with the machine of the grounds that its sales staff would not be able to explain it properly. "Quite a few high street retailers want to stock the machine but we wouldn't be able to meet the demand at the moment and there will be a lot of customers who buy it without understanding it — the shops won't be able to help and they'll tell them to ring us here — we've had it before and we don't want it to happen again."

The two-day training course was impressive, amiable, mildly chaotic but genuinely educational. I, who certainly knew far less about music than the assembled dealers, managed to program a synthesizer and ended up by being able to write quite complicated multi-port music.

The whole experience of the course was strange and quite different — maybe it is all part of a devious oriental plot in which Yamaha make us all learn music and so increase the market for their products.

Whatever else it made a refreshing change from the usual 'micros as boxes to be shifted off the shelves' approach.

You could view it as a kind of arrogance — Yamaha is so convinced that the CX5 is a wonderful machine that it feels merely making the facts clearly known will be enough. They could well be right.

The vanguard

Machine HX-10 MSX **Price** £279.96
Supplier Toshiba (UK).

The Toshiba HX-10 is the first MSX computer to be widely available in this country, and admirably fulfills its role as the vanguard of the much awaited Japanese invasion.

It is a straightforward implementation of the MSX specification, without any distracting options, such as the music synthesiser offered with the Yamaha machine I reviewed many months ago.

Since that time the threat of a wave of MSX machines has undoubtably worried many of the home-grown manufcturers. Many software companies have taken the prospect seriously and have produced, or are in the process of producing, titles for the format.

However, now that the cost of these new computers has been finalised, press and public reaction seems to be muddled — they are not as cheap as expected, and therefore quite easy to dismiss as "poor value for money". If this were the only way to judge a home computer then we might be able to ignore the Toshiba and its kind, but there are more factors in the equation. Buying an MSX machine should ensure that you own a micro which will not be left high and dry in six months time. Already, large sales in Japan mean that software, at least of the games variety, should be available for many years to come. In addition, packaging and marketing can be as important in the consumer market as all the other factors combined.

Curry's, who are reported to be taking 2000 Toshibas a month, must believe that they can sell the machine, but is it a mistake ■ treat the average computer buyer in the same manner as you would any other customer?

The Toshiba HX-10 is a pretty typical MSX machine. The standards for the MSX Version 1 have been carved in stone. Every machine will have the following components: a Z80A CPU running at a clock speed of 3.5 MHz, 9918A (or compatible) video display chip, AY 3-8910 sound generator, 32K Rom, 16K Ram for the screen plus *at least* another 16K Ram for system use. Firmware consists of an extensive operating system and Basic interpreter written by Microsoft. The specification also includes items such as the keyboard, which must have certain keys as well as the Qwerty layout, and details of connectors, such as the Rom port. All of the MSX machines are software compatible and can use the full range of MSX approved peripherals.

The quality of construction of the Toshiba is impressive — although the case is plastic it is strong and should be able to withstand a few knocks. It also feels heavy, as the mains transformer is contained inside the box, and not supplied in a separate power supply. The machine is well proportioned, 14.5 by ■ inches, and slopes gently from back to front. Quality is reflected in the connectors — no edges of circuit board protrude through the case. Using Rom cartridges is very easy: a slot in the top left-hand corner is covered by a sprung door, and as a Rom is plugged in a microswitch interrupts the power supply. This ensures that nothing nasty will happen if you don't switch off before plugging something in. A neat refinement.

Quite rightly, computer keyboards are considered an important component by public and manufacturers alike — witness the new Spectrum+. Even the Sony Hit-Bit MSX model which has a rubber Spectrum-type keyboard ■ its Japanese version has been given a 'professional' keyboard for the UK.

The HX-10 scores well on this point. Individual switch mechanisms for each key give a good feel and the rake is adequate. The alphanumeric layout does present a few oddities: I cannot get used to the position of the punctuation marks. There are five function keys along the top row, which, in conjunction with the shift key, give ten pre-programmed Basic commands. These can be easily redefined using the *Key* command.

There are also insert, delete, back-space, home and stop keys, plus four cursor keys. This last group are slightly distanced from the others. They are essential for editing programs, but the tendency for games software to use them as the alternative to joysticks makes me wish they were larger and wider apart.

Compare the physical aspects of the Toshiba with, say, the Sinclair QL, and there is no question about which wins. In the price range I cannot think of a computer of better construction.

Memory capacity of the HX-10 is 64K of Ram, but on power-up only 28,815 bytes are available to Basic (although much of the unused Ram can be claimed by machine-code programs). However, the video ram is independent, so using high-res graphics will not eat into spare memory — you lose 8K on the CBM 64, and the highest graphics mode of the BBC model B leaves less than 4K available. If large memory capacity is important to your application then most of the middle ground 64K computers will be a disappointment. The QL, with over 90K easily accessible to Basic, is the only really "big" machine.

With 32K of firmware stored in Rom, it is not surprising that MSX Basic can be described as extensive. The language supplied by Microsoft has all their trademarks: for example, *Left$*, *Right$* and *Mid$* for string slicing, and variable names signifi-

cant to the first two characters. Mathematical applications will benefit from the accuracy of MSX Basic, which boasts double precision numbers capable of storing a 14-digit value.

Most of the exciting commands available to MSX will be of interest to games writers: sprite handling and collision detection, an interrupt-driven timer and even an *On Strig* command that diverts a program to a sub-routine whenever a joystick fire button is pressed. There are also useful *On Error* statements, base conversion functions for binary, octal and hexadecimal and a macro-language to play music supplied in the form of strings.

Where MSX Basic leaves something to be desired is in its provision of structured programming statements. Perhaps this is an indication of the age of the system, the groundwork for which must have been laid down at least a couple of years ago.

Other non-MSX micro manufacturers have followed the example of Acorn's BBC machine to some extent and, although most don't go as far as SuperBasic on the QL, even Commodore have included a *Do Until Loop* on their new computers.

MSX Basic compares favourably, however, with most other Basics, particularly if you wish to write games in a high level language. It does not have the elegance of BBC or QL Basic, or the speed of the BBC or

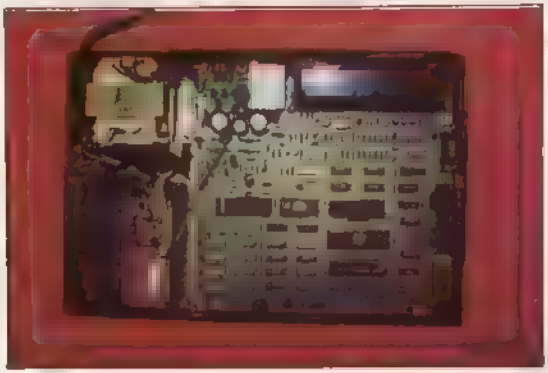
Amstrad. Against the Spectrum, the MSX spec looks good, and to be quite honest, the Commodore 64's Basic would make any extended Microsoft version — as in the MSX — seem attractive.

The actual effort of writing programs on the Toshiba and its brethren is minimised by the full screen editor and programmable function keys, but without any structured commands you may find yourself making much use of the *Tron* statement to debug your programs.

The video display of the Toshiba can be viewed in two ways: there is an RF output to feed a domestic TV, and a composite video socket. But the resolution is such that using a monitor is not really necessary. Two sizes of text screen are available, as well as high-res and multi-colour modes. Additionally, sprites can be used with all screen modes except one. Software actually reduces the number of columns in both text modes, to avoid information falling off the edges of domestic TVs: and the border only exists at the top and bottom of screen.

Therefore the 40 × ■ character mode normally only gives 37 columns, and as character spaces are only six pixels in width, graphic characters are not always correctly displayed. It is this mode that cannot support sprites, and only two colours from the 16-colour palette are available.

The normal width of the 32 × 24 character mode is 29 columns, still with only two colours, although the border may take on a third shade.



Calling up the high-resolution mode means that you will have to use special tricks to display text. The resolution is 256 × 192 pixels, but the colour resolution is restricted to areas of 1 × 8 pixels, each of which can contain one *Ink* and one *Paper* colour.

The multi-colour mode divides the screen differently — 64 by 48 blocks — each of which can assume any colour. The palette's 16 colours include *Clear*, and the usual spectral shades in varying luminances.

The sprite screens are very impressive. You can have 256 × 8 × 8 shapes, and a magnification ■ possible so that they occupy a 16 pixel block. Also, larger ■ × 16 sprites may be doubled in size to 32 pixels square. In this mode, up to 64 shapes can be used. The sprites are arranged in 32 planes — or levels of precedence — allowing shapes to pass under and over each other, and up to 32 sprites may co-exist on each plane. There is a limit, however, of 4 sprites on any one screen row.

If the great asset of these screens are their sprites, then the main drawback must be the difficulty of mixing text with graphics.

One important question to consider when buying a micro is whether you want an 80-column screen — and if you are considering word processing then this ■ a very desirable feature. Software for MSX — along the same lines as the Spectrum's *Tasword Two* — will be able to achieve an acceptable 64-column display on MSX computers, but the BBC model B, Sinclair QL and Amstrad all offer an 80-column display as standard.

In the area of sound and music, the AY-3 8910 PSG in the MSX specification gives the Toshiba one noise and three tone channels. Instead of the in-built speaker that is often found on home micros, there are two ways of getting sounds from the HX-10. The audio signal is either modulated onto the RF feed so that it can be played through the TV speaker or the phono socket or the Toshiba can supply a hi-fi sound system. Both methods give better quality than most internal speakers. The effects possible are on par with the best of the competition — only the Sinclair micros are notable for not having a dedicated programmable sound generator chip.

Documentation supplied with the Toshiba comes in two parts: an owner's manual and Basic reference book. The division into two parts means that only the owners manual, a fairly slim volume of 92 pages, needs to refer to the HX-10 specifically. It mainly deals with setting up, operating the cassette interface and the use of the control keys.

The Basic reference manual is full of detail but beginners will probably need extra help to learn programming from scratch.

The amount of decent software available for a computer makes a great deal of difference to sales. A substantial number of the top software houses are committed to writing at least something for MSX. Games software for the MSX range is helped by the standard's graphics and sound facilities. Useful application packages will no doubt follow on from the games if demand dictates.

I find it difficult not to think of the HX-10 as a games computer. The Basic supports this concept, as does the lack of an 80-column screen. There is nothing to be ashamed of in wanting a computer to write and play games on, with thoughts of moving on to other applications at a later date.

In this area, the Toshiba is an expensive option. Commodore, Atari and particularly the new Spectrum+ all present lower-priced possibilities with good software bases.

If you want to write structured Basic as well as zap aliens then the Acorn Electron costs less even after adding a joystick interface. Where the real conflict will come is between Toshiba, Commodore and Amstrad, side by side in the shop windows.

Amstrad seem to have sufficient software available, and a price advantage, while the ol' ■ is extremely well established. And if cost is not an important factor, then the QL and BBC can play games too ...

Jeff Naylor

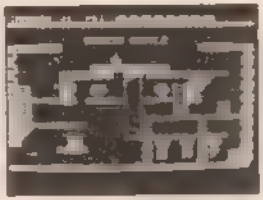
Program *Spirit of the Stones* **Micro** Commodore 64 **Price** £14.99 **Supplier** Commodore 64.

Imitation may be the sincerest form of flattery, but I fear that two major trends in the computer games industry have now been imitated to the extent that they are in danger of driving the customers to some more original and stimulating activity - watching paint dry, for example.

The two trends are that of the "platform and ladders" problem, brilliantly used in *Manic Miner* and several of its clones but now just about as hackneyed as *Pacman*, and the new obligatory "prize quest" with virtually every game produced. A superb example is the way these aspects of gamesmanship can be stretched to breaking point comes in the latest offering from Commodore, *Spirit of the Stones*.

This has just been launched with much flourish and publicity in a mightily impressive package. With the disc or cassette the lucky buyer gets a hard-cover book called, amazingly enough, *Spirit of the Stones* which chronicles the mystic quest of young Mark, the hero, on the Isle of Wight.



The game is based on the book and the aim is to find the "Great Wight Eye", the main talisman, through playing the game, based on a map of the Isle itself, as well as other talismen any of which can give a claim to part of the royalties for the game.

All in all, it's a great pity the game dismally fails to fulfil any of the hype involved in its packaging. It's a fairly simple arcade effort, with excellent sound (*Night on a Bare Mountain* for some obsure reason) and acceptable, although not exceptional, graphics. Your character can be manouevred around the map, avoiding nasties which sap his "psi" level, into various houses. These offer varieties of the ladder and platform screens in which you pick up diamonds and other goodies, and avoid spooks, falling crates and the like.

There are clues in the book (which is not, I fear, likely to win many literary prizes) but frankly I couldn't get interested enough in the game to figure them out. Nor, more to the point, could my review assistant, a 10-year old arcade enthusiast whose interest has so far foreshadowed the success of games tried on him with uncanny accuracy. Nice package, shame about the contents.

Barbara Conway

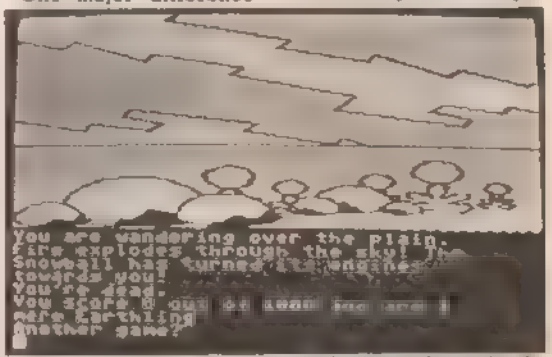
Unscathed

Program *Return to Eden* **Micro** Commodore 64 **Price** £9.95 (tape) £11.95 (disc) **Supplier** Level 9, 229 Hughenden Road, High Wycombe, Bucks.

The appearance of a new program from Level 9 is a flag-day for all aspiring adventures and, in my household, a signal for the cat to hide under the bed for the duration against the inevitable moment when I go rampaging through the flat, a wild look in my eyes, muttering ferociously about bricklaying birds, nudist beaches and the like. Since *Return to Eden*, the sequel to *Snowball* is out, the cat may be in hiding until Christmas.

You don't need to have played *Snowball* to get into the sequel as ever, there is ample documentation with the tape which, in my Commodore version (it is also on the Spectrum, Amstrad and BBC), is turbo-loaded. It starts with you, agent Kim Kimberly, having been framed for sabotaging the colonyship Snowball, in a crashed stratoglider on the planet Eden. For the moment your mission is to survive the misplaced retribution by your own people, but life gets very much more complicated than that. Solving these puzzles has nothing to do with luck; you either figure your way out of trouble on Eden or die there.

One major difference between this and former Level 9 efforts is that the Spectrum and C64 versions have graphics of a very high quality and can be switched off if required. The scope of the vocabulary appears unscathed by this addition.



Even experienced adventurers will probably get fried a few times by the avenging engines of the Snowball, before discovering how to take shelter. But, once that hurdle is passed, the real adventure begins, and it's a lulu. From the radioactive desert caused by the engine blast, you progress through a variety of hazards through some highly unlikely locations.

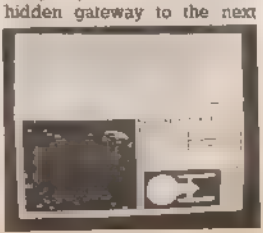
I haven't got to that point yet, and so far superhuman willpower has stopped me using the clue sheet provided, but I can't hold out very much longer since I am having what could be lethal communication problems with some robots. Terrific fun, but should carry a mental health warning.

Conway

Gateway

Program *Warp I* **Price** £8.95 **Micro** BBC B **Supplier** Icon Software, 68 High Street, Bosforth, Tyne & Wear.

Maybe it's the television re-runs of Kirk, Spock and co. that have brought out another rash of *Star Trek* games. They all ask you to pilot a ship through quadrants of the galaxy, blasting Klingons when you find them. After destroying all the enemies in one part you can move on via a hidden gateway to the next quadrant. Your ship is equipped with protective shields, a fast warp drive for long-distance work and a slow ion drive for local work, including docking onto bases to resupply the ship and phaser weapons.



The latest version to flash past is *Warp I* by D Crofts and I Elliott. The authors specify who did what, but both have the nerve to claim credit for "game design"!! What Crofts does deserve recognition for is some stylish graphics and a splended hyperspace display. Otherwise it is pretty routine and even lacks some of the sophistication found in other versions such as photon torpedoes.

The only notable feature is that you have to be nimble with the cursor keys to aim accurately at Klingons and to manoeuvre for docking.

Jan Watterson

A profit

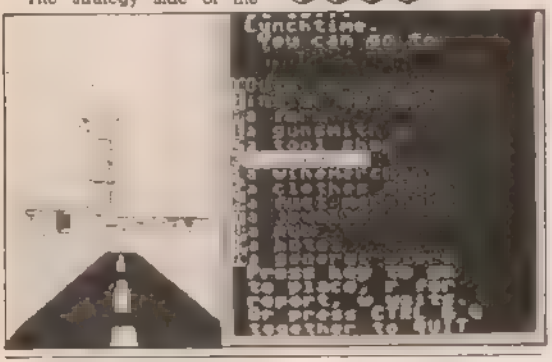
Program *Star Trader* **Price** £6.95 **Micro** Commodore ■ **Supplier** Bug Byte Mulberry House, Canning Place, Liverpool.

Star Trader is one of the very few games to successfully combine arcade action with adventure strategy. The scenario involves trading in various commodities such as grain, gold or guns, between a small group of inhabited planets. Unfortunately, interstellar pirates have taken advantage of the valuable trade between the planets, and any trader must run the gauntlet of the fleet of pirate ships which lurk in interplanetary space. Your objective is to keep on trading (at a profit, of course).

The strategy side of the game is fairly straightforward, and basically consists of buying goods cheaply on some planets and selling them at a profit elsewhere in the system — not as simple as it sounds. You must also make sure that you keep yourself correctly fed, and that your ship is stocked with lasers and powerpacks. Irritatingly, the shops where you can buy commodities seem to be shut more often than they are open.

The interplanetary journeys are nicely depicted in 3D graphics, presenting you with a view of passing stars and meteorites through the 'front window' of your craft. If you encounter pirates you can either buy your way out ■ trouble or fight, which is where the arcade action enters the game. Enjoyable and absorbing.

Richard Corfield



Economic

Program *Select 1* **Price** £13.49 **Micro** Spectrum 48K **Supplier** Computer Records, 21 Napier Place, London W14 8LG.

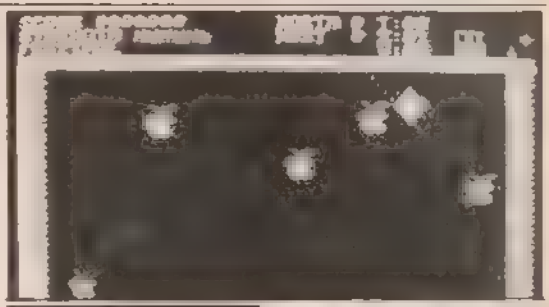
Did Santa Claus ever bring you one of those Compendiums of Games with Draughts, Ludo, Tiddly Winks, et al? Well, here's the computer equivalent and it's probably aimed at the same Christmas stocking market. However, instead of cardboard counters you get a dozen offerings from the likes of Anirog and Ocean.

A *Hunchback* rubs shoulders with *Kong*. *Mr Wimpy* drives a *Moon Buggy* in a *Meteor Storm* while *Space Intruders* play *Pool* instead of manning the *Missile Defence*. There's Trekkie in action through the *Time Gate*, *Transversion* and a reverse version of *Pacman* called *Spectres*. Lost in this arcade anthology is the satirical, political adventure *Denis Through the Drinking Glass*.

A couple of these games are very good and not one is really poor, though several have better alternatives — CDS's *Pool* beats Bug Byte's version here, for example.

But for new Spectrum owners, particularly those with joysticks (almost ■ the games play better with one) it ■ an excellent, economic introduction to some arcade classics. Otherwise its value will depend on how many of these games you already have.

John Minson



Fast blast

Program *Ancipital* **Price** £6.95 **Micro** Commodore 64 **Supplier** Llamasoft, 49 Mount Pleasant, Tadley, Hants.

Jeff Minter's furry animal fetish is allowed full expression in not only *Ancipital* camels, but also goats, guinea pigs and llamas fill the screen. Quite apart from the animals, just about everything except the kitchen sink makes an appearance at some stage — spanners, cassette, fruit, pyramids, cigarette papers, you name it.

The reason for all this paraphenalia floating about is wrapped in the pseudo science fantasy blurb that comes with the game. It is far too long and complicated ■ go into here but the upshot is that you have to make your way round 100 rooms, clearing the 'hostile forces' (presumably the spanners and fruit?) from each one in turn by shooting them as fast as you can. To move from room to room, you have to discover the means of unlocking the walls in each room.

The game is basically a fast blast, as its author likes to call it, but it does involve some strategy in the unlocking of the rooms and the planning of your moves. However, despite (or perhaps because of) the variety of objects whizzing about, the graphics are rather dull.

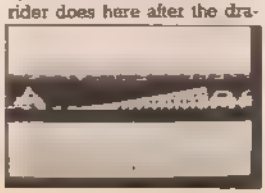
Frankly, it's not one of Jeff Minter's best efforts — somehow I got the impression ■ derived more fun writing it than I did playing it.

Richard Corfield

Bike jump

Program *Eddie Kidd Jump Challenge* **Price** £5.95 **Micro** Spectrum 48K **Supplier** Martech, Martech House, Bay Terrace, Pevensey Bay, East Sussex BN24 6EE.

The number of sport simulations in the recent month encourages the view that computer games are merely weedy button pushers. But one physical activity that is better left to the programmer's art is jumping over cars on a bike. After all, you may not get up and wave so quickly as the rider does here after the dramatic and all too frequent crash landings.



The aim ■ simple: judge the bike's speed and the rider's position, which is vital to avoid rolls, and launch yourself off the ramp. Successful jumps are scored for style, more cars are added and you try for the record.

It's not easy to master even the shortest jump, and every crash dumps you back to the start, where as an Eddie Kidd kid you jump oil cans on a BMX pushbike! As it's hard to fail at this it has no practice value and becomes tedious.

However, it does pad out the game which, though it is well animated and addictive for a while, is unlikely to have lasting interest. Of course there is the inevitable competition tie-in, but that's no compensation for a thinnish game.

John Minson

Justified

Program *Tasword 464* (also sold as Amsoft's *Amsword*) **Micro** Amstrad 464 **Price** £19.95 **Supplier** Tasman Software, Springfield House, Hyde Terrace, Leeds.

This is an incredible advance on the Spectrum's *Tasword Two* and, to be honest, even professional business software companies should start to worry because it comes close to rivalling *Wordstar* in sophistiscation. You could buy a daisy wheel printer for the difference in price!

As well as standard features like justify, find/replace, block movement, line centreing, tabs, etc, there is the ability to define header and footer notes, greatly expanded printer control commands including page numbering, forced form feeds.

Default printer control characters are for the Epson FX-80, but can be easily customised. Using programmable keys, the numeric pad can be made to produce preset text such as your name and address up to a total of 120 characters.

For many the most eye catching feature of *Tasword Two* was the 64 column screen, but after some use I began to feel that this was a limitation and would have preferred the option of selecting the number of columns using a scrolling display. Fortunately, despite the Amstrad's 80 column display, *Tasword 464* allows selectable page width of up to 128 characters.

Unlike Psion's *Quill*, paragraph justification is not automatic after corrections are made, but this can be an advantage as it allows you to tackle two column text.

Documentation is extremely clear, comprehensive and friendly, and there is an optional on-screen help window which can be scrolled to reveal all the commands possible.

The program's one, inevitable, limitation is that it is tape-based, but this is made less painful by useful counts of the number of words, lines and characters used as well as the number of characters free. There is also the option of fast save and load. The good news is that both *Tasword* and your text files can be transferred to disc with no alteration.

Perhaps we can hope for an upgraded disc version with the Ram windowing on 100 K+ disc files like *Wordstar* and with the addition of mailmerge facilities, but even as it stands there is no better justification for buying a 464 than this program.

Tony Kendle

For sale

Program *Country Cottages* **Micro** Amstrad CPC 464 **Price** £00.00 **Supplier** Sterling Software, Garfield House, 86/88 Edgware Road, London W2 2YW.

In *Country Cottages* you play the part of a property wheeler-dealer striving to get rich quicker than your opponent. Starting with a £100,000 overdraft facility, you have a chance to advertise, alter the rent of or sell a cottage in each town. You can view cottages for sale first to find out their condition, before a very good illustration of the cottage is drawn. If you decide to buy, the cottage is auctioned in real time with both players bidding against each other.

When you advertise a cottage you have to decide on the rent that you want for it. Be careful though, if you are greedy then nobody will turn up. Increasing the rent too much will upset your present tenants, who will leave if you don't cut the rent to a reasonable value.

The game has some very nice touches, such as tenants wishing you a Happy Christmas, pipes bursting in the frost, thunderstorms causing fires, burglars, and furniture smashing children — all of which cost you money. But after a lot of play it will become a little monotonous to play due to the restricted number of options that are available.

Greg Pearson

Compulsive

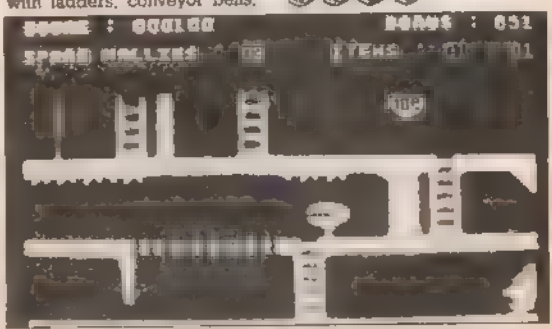
Program *Trollie Wallie* **Price** £7.95 **Micro** Commodore **Supplier** Interceptor Micros, Linden House, The Green, Tadley, Hants.

Trollie Wallie is the latest interceptor game to feature Wallie — an orange blob on legs — one of their stock characters. Here he is trying to do his shopping in the supermarket, and a bizarre one at that. Forty shopping items are arranged around the shop which is laid out like a maze with ladders, conveyor belts, moving walls, and some weird looking other shoppers. The object is to collect all the items from the shop, but Wallie must make a journey to the checkout after picking up every five items.

It's enjoyable, although very much a standard maze game. The supermarket theme applies only to the objects which you have to collect, such as cabbages, cakes, light bulbs.

Graphics and music effects are very well done, once you get the hang of things, it becomes quite compulsive.

Richard Corfield



Lose Points

Program *Ziggurat* **Price** £2.99 **Micro** Spectrum 48K **Supplier** Software Supersavers, Bear Band Complex, Allerton Rd, Woolton, Liverpool.

A *PCW* feature now a game? Not quite, because unlike the column of the same name, *Ziggurat* is exceedingly bland.

Not that it's actually bad. There's imaginative use of sound, suitably rude for silly inputs, and coloured borders for effect.

But where's the character? What's the logic behind this dungeon? Minimal insert notes don't help. You wander through a succession of named, but otherwise anonymous chambers, without knowing who you are or why you're there, until it becomes depressingly obvious that you are in a packed five by five grid.

I like the way you lose points for resorting to *Help* which can only be used a limited number of times — but applying the same rule to program saving seems very harsh. The vocabulary isn't vast and is irritatingly particular.

John Minson

"You really can't go wrong with any Level 9 game as they are all brilliant." *Crash Micro Sept 84*

RETURN TO EDEN

Level 9's first amazing full-colour graphical adventure

Return to Eden is the long-awaited sequel to Level 9's top-selling Snowball adventure, set on the weirdest planet ever. Now it's here with 240 locations, masses of puns and puzzles and with hundreds of pictures in the AMSTRAD, CBM 64 and Spectrum versions.

"Whichever machine you own if you have the vaguest tendency towards adventure playing then you must try one of these games (unfortunately you'll probably end up wanting to buy the lot
– *Computing Today Aug 84*

"The Level 9 Adventures are superbly designed and programmed, the content first rate. The implementation of Colossal Cave (Adventure) ■ nothing short of brilliant. rush out and buy it. While you're at it, buy their others, too. Simply smashing!
– *Your 64, June 84*

"Level 9 – arguably the producers of the best adventure games in the UK – have done it again. Lords ■ Time is a sparkling addition to its stable of winners."
– *Acorn User July 84*

"One of the best adventure games I have ever had the pleasure ■ get my hands on. I can recommend Dungeon Adventure without the slightest fear of being contradicted. This is a massive sojourn into the unknown."
– *Memopad Oct ■*

The Saga ■ Erik the Viking a remarkable Adventure game it carries all the hallmarks of a Level 9 Adventure – problem, text display and size of map – with graphics of a standard I have not yet seen before in an Adventure
– *Computer & Video Games, Oct 84*

"I thoroughly recommend these Adventures they are excellent value for money. No self-respecting Adventure-addict should be without them. I believe Level 9 are producing a series of Adventures which should be regarded as classics."
Page 6, July 84

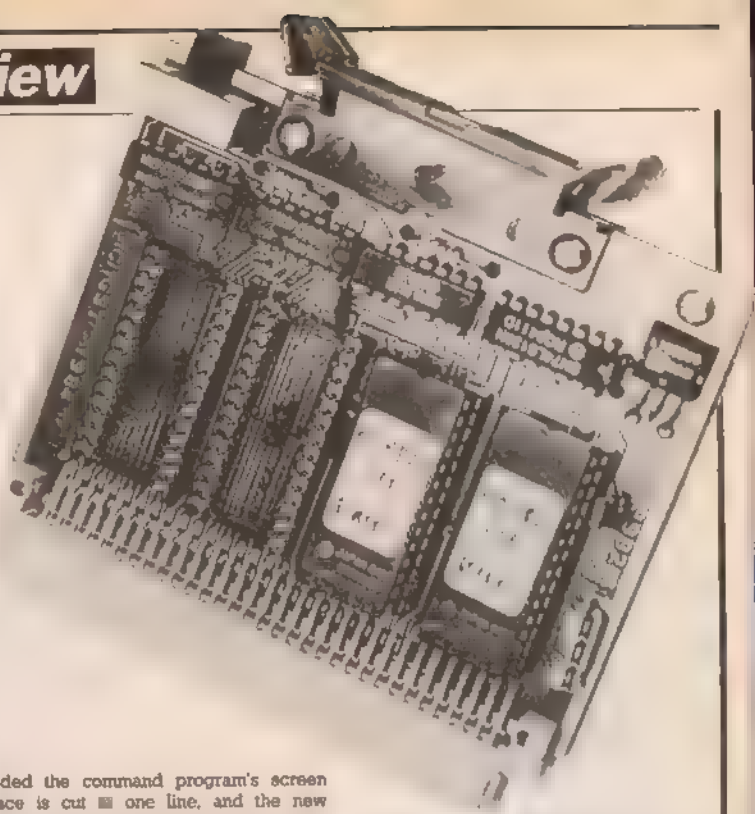
Second option

Hardware *68K/OS operating system* **Micro** QL **Price** £144.85 (68K/OS board, £99.95; bundled software, £39.95; manuals, £4.95) **Supplier** GST Computing Systems, 91 High Street, Longstanton, Cambridge



The 68K/OS operating system for the QL is the operating system for the machine that was written by Cambridge-based GST for Sinclair and developed in parallel with Sinclair's own QDOS written by Tony Tebby.

In fact the GST QL operating system was the one demonstrated at the launch of the QL in January — Sinclair's own QDOS had then still to be completed (as became rather obvious when the QL became first delayed, and then began appearing with an Eprom appendage in the Rom cartridge port). Following Sinclair's decision to adopt QDOS in preference to GST's 68K/OS, GST has continued to develop 68K/OS and will soon begin selling it as an add-on for the QL.

The board connects to the left-hand expansion port of the QL, once the blanking plate has been removed. When this is done only a switch can be seen and this allows you to choose between QDOS or 68K/OS when the computer is turned on or reset. On start-up 68K/OS gives you five screen options asking you about the number of characters per line you want — the choices are 85, 80, 60, 42 and 40 characters per line. After making your choice the command program is booted from Rom. This gives you information on programs running and stores the microdrive maps for use by other programs. As well as this you can access the operating system itself, allowing you to re-alocate the screen and suspend/kill programs which you no longer need.

The 68K/OS board has space for up to four 16K Eproms, only two of which are used by the operating system and the command program.

Also with the board are supplied two microdrive cartridges which hold accompanying software including a machine-code assembler and a file editor for the system.

Why then is 68K/OS better than QDOS — and what makes it worth having both?

First, unlike QDOS, it multi-tasks all programs loaded into the system with any programs already held. Unfortunately, at the moment, there is no commercial software available under 68K/OS, so you have to write your own. Without a high-level language, you will also need to know 68000 machine-code.

Again, unlike QDOS, any text overwritten by a different screen window will be saved allowing you to scroll it back on to the screen at a later date. This is seen when you are using a program as well as the command program. When a program is loaded the command program's screen space is cut ■ one line, and the new program takes up the rest ■ the screen.

The system to control microdrive files is far better on 68K/OS than QDOS as you can access a file by giving the name of the tape and file name — in QDOS you must use a fixed drive. Also 68K/OS does not allow you to replace a tape with another tape while a file is still open.

The editor supplied with the operating system will edit any text file or may be used as a simple word processor which is faster and easier to use than *Quill*. The assembler is capable of assembling a text file produced by any other program.

Both these programs can be held in Ram at the same time and so may be used together, though a text file has to be placed on to a microdrive before the assembler can use it. Under 68K/OS the operation of the QL's two microdrives has also been greatly improved — both in speed and reliability. The microdrive system formats the tape with 1K blocks instead of the 0.5K blocks used by QDOS. This means that only half the number of blocks need to be found when loading a file. To improve reliability, a maximum of 100K is stored on each tape.

Other programs supplied with 68K/OS — apart from the editor and assembler — are a draw program, a terminal emulator, and programs to format and copy microdrives and print to an Epson FX-80 printer.

More titles which are planned to be launched later this year are Fortran, Pascal and a more sophisticated assembler package.

Programs to be launched next year will include Basic and a C compiler. These programs may be supplied on Eproms — to plug into the unused sockets on the board — and so will use little of the Ram. To go with these GST plans to sell a range of programs similar to the Psion titles which will work under 68K/OS. GST also plans a disc drive which will run under both 68K/OS and QDOS.

Four manuals cover the areas of the assembler, user manual, application software and programmer's information. The information held in these manuals is well set out though it is not designed for the first time user. Then, in all honesty the OS system is itself highly complex and also not really intended for the first time computer user.

The Programmer's Manual gives information on all the system calls and makes up most of the documentation while the user manual is much smaller and unfortunately gives little information to help the user.

On the whole, Sinclair may have made the right decision in going for QDOS rather than 68K/OS, but only because of the latter system's inaccessibility to a new computer user. Otherwise the 68K/OS offers superior performance.

Instead, the idea of up-grading to it when you want more power and control is far better. A QL and 68K/OS is very good value for anyone who wants a system which can display the idea of multi-tasking and run a language like Fortran all for under £600.

Sadly though, the majority of QL owners are unlikely to consider the added benefits of the 68K/OS worth the £145 price tag.

Roger Thomas

BEWARE. THE CYCLONE.

"Brilliant..." Elementary my dear Watson.

'Sherlock must be the most complex adventure ever created.
The creation of atmosphere is superb (more like that of a novel than a computer game) in fact playing the adventure feels more like acting than playing a computer adventure.
The characters in Sherlock behave just as they would in real life and have a very human feel to them, not only in the way they react to situations, but also in their displaying of human emotions.'

MR STERN, HERTS

'Sherlock Holmes has been well worth waiting for with an 800 word vocabulary, real Victorian transport system — cabs and trains and all, and a cast of characters peopling graphics screens designed by Mugsy man Russell Comte.'

YOUR COMPUTER

'Sherlock is an incredibly sophisticated program. The most impressive feature is the convincing way in which the leading characters go about their interrogations and how these can be followed up with meaningful discussion between the protagonists.'

CRASH

'I have been totally entnralled with this new brilliant adventure. I thought the Hobbit was good, but the added vocabulary and the even more intelligent characters, makes Sherlock number one in my software collection.'

MR ROGERS, BATH

'Your game is atmospheric. I have to admit it is actually real. I am referring to of course, the characters who work so independently that I am amazed at their individual characteristics every time I play the game.'

MR DEMPSTER, SCOTLAND

'In Sherlock you can not only talk to other characters, of whom there are at least thirteen, and ask them to do things for you, but you can also interrogate them and even discuss the case.'

SINCLAIR USER

'Rich mental imagery.'

White on black

Explore your artistic talents to the limit (well almost) on any Spectrum using Doodle, by ***M Shillito***

Doodle is a drawing program for either the 16K or 48K Spectrum, using under 2K of memory. It allows you to draw in any direction in any colour, or use a 'blackboard' effect (that is, white ink on black paper). There is also a facility for filling in enclosed shapes.

To use the program, first you must enter the appropriate mode. Press *D* for Draw Mode ... in this mode cursor keys (5 to 8) are used to draw straight lines. *I* allows you to choose the *Ink* colour, while *E* will let you erase the inevitable odd mistake. *A* is Angle Mode which draws lines at 45 degrees up or down to the left (5 and 6) and up and down to the right (7 and 8 respectively). *M* moves the cursor without drawing. *B* brings in the 'blackboard' effect ... *W* returning to the original black on white screen.

Finally, if the cursor is moved into an enclosed shape and *F* is entered, it will automatically be filled with the current *Ink* colour.

Program Notes

Line 3	Sets cursor to centre of screen
Line 5	Sets *Paper* to white
Line 7	Sets *Paper* to black
Lines 12-19	Draw by *Inkey$* changing x,y co-ords
Lines 30-48	Change *Ink*
Lines 50-60	Move cursor over by one
Lines 70-75	Deal with angle lines
Lines 90-112	Work out x,y co-ords of bottom left of shape to fill

Rainbow's Spectrum Programmable Joystick Interface

This interface allows any Joystick position to represent any key or keys on the board without leads, hardware or software. All joystick positions are programmed simply by selecting the joystick position, pushing the desired key(s) on the Spectrum, releasing the joystick, and then the key(s).

It is flexible, allowing diagonal positions to be programmed with any keys, also auto fire on joystick positions if desired.

The internal Amplifier boosts the Spectrum's weak sound with a simple connection to the ear or mic socket

With optional through port

FAST LOADERS **COMMODORE 64** TAPE TO DISK

R.B.S.

A NEW GENERATION conversion utility, developed from the acclaimed Hypersave-64, R.B.S. converts virtually all your long loading cassette programs to TURBO-LOAD, faster than the CBM disk drive. Multi-part and autorun programs are handled with ease. Converted programs load independently. No additional hardware, no pokes, no SYS calls, no user knowledge required. Load "The Hobbit" ■ 120 seconds. Tornado. Lightning load, Fastback now obsolete. R.B.S. will convert more programs than any competing utility. Cassette £7.50p.

HYPERSAVE-64

Retaining the flexibility which the programmer demands. Hypersave leaves you in control. 8 additional Basic commands. Save, load, verify up to 48K continuous Ram at HYPERSPEED with full error checking. Converted programs reload independently. Autorun facility. Hypersave also allows a small number of fast loading programs to be converted to Hyperload. Reviewed ■ Your 64 issue 2. Cassette £7.50p.

DISKUS I

Introducing the new market leader. This is the simplest to use and most efficient tape to disk tansfer utility yet devised. No program rewriting is required and transferred programs will automatically run when loaded.

★ For single, multi, and autorun programs
★ Automatic filename handling
★ Efficient use of Disk space
★ No user knowledge required

Diskus 1 will handle several program types which other utilities ignore, including headerless files. A bonus program is included which will transfer a number of fast loading programs to disk. Cassette £9.99p.

PRO-SPRITE

Library, Editor, Animator for single and multicolour sprites. Joystick control. Packed with features. Menu driven. 100% machine code. Complete with your first sprite library. Cassete £7.50p.

Salamander SOFTWARE DISCOUNT CLUB

FREE STICKERS

FREE MEMBERSHIP

THE OPENING LETTER

Dear Dragon Owner,

Are you tired of being left in the lurch trying to find quality Dragon software in the shops? Relax! Now Salamander Software brings you the Software Discount Club which offers the best value in one of the widest ranges available.

As we promised here are the further stupendous discounts on our entire range.

Just clip the coupon below — and get free membership to the Salamander Software Discount Club and see how much you can save.

Membership gives you further discounts — a minimum of £2 and possibly much more on any future order.

If you are already a member you will be entitled to a further £2 off the discounts listed below but please quote your membership number when ordering.

Greater bargains will be had on our stand at the 6809 Computer show on the 17th and 18th November at the Royal Horticultural Halls. So see you there!

Send today and bring out the best in your Dragon with the Salamander Software Discount Club

NEW!

Listings made easy

One for disc owners . . . ***Rod Pidgeon*** *takes the strain out of complex listings for the 64 or 8032.*

Programmers who use Commodores tend to get into a way of working which optimises Commodore Basic, but can make programs difficult to understand. All too often I have needed to amend a program written a few months ago, and found the listing not easy to read.

The main difficulties are caused by the use of multi-statement lines and the omission of spaces, both of which are used to save on the space taken up by the program. They are useful, too, when an *if-then-else* construction is wanted. The *if* and *then* statements are put on one line, and the next line becomes the *else* statement.

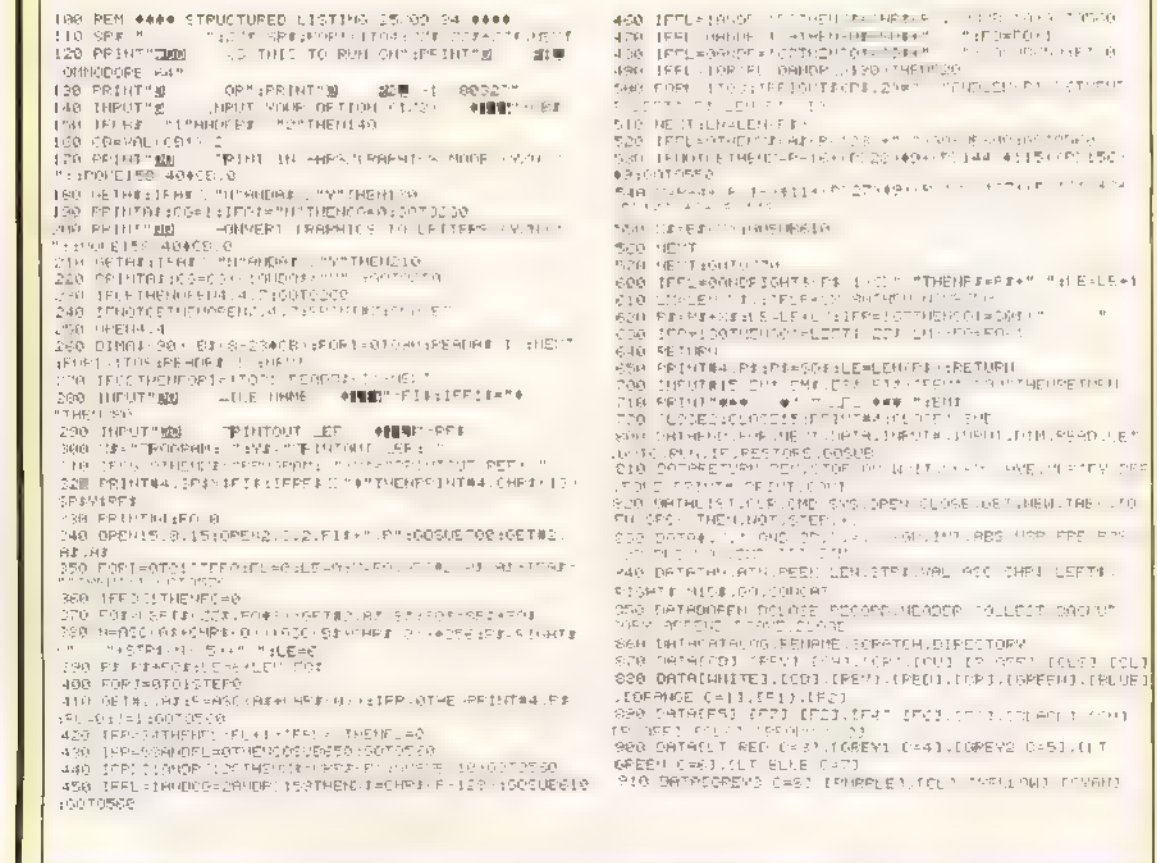
The problem was to make listings of programs easier to understand, and nearer to the structured form in which I plan my programs. What I wanted was a program to print listings which have one statement per line, spaces on each side of keywords, clearer instructions for cursor control and colour symbols than the present reversed characters, and which indents loops and conditional statements.

This program meets the required criteria with a few exceptions. It does not recognise multiple *next* statements — use *next-next* rather than *next j, i*. It needs a *then* in a conditional statement — *if x = 3 then 500* is preferred to *if x = 3 goto 500*. It is confused by multiple exits from loops, and prefers only one *next* for each *for*. Due to Commodore's system of keywords it sometimes adds spaces in peculiar places — *get#* becomes *get #*, for example. However, it has made some programs which I wrote long ago and forgotten all about, quite easy to understand.

Both this program and the program to be structured must be loaded on disc and a suitable printer connected. First, *Run* the program below.

This program starts by setting up two strings of spaces, for future use. Then comes a menu. As I use the program both on a Commodore64/1541/1525 and on a CBM8032/8250/8023, this gives machine options, together with the facility to print either in lower case or in capitals, and if so, allowing any capital letters to print out either as graphics or as letters. Finally you are asked for the file name of the 'target' program, plus any reference (ie, date) you may care to give the printout.

The program file is opened as a sequential file, and which is read, byte by byte, using *get#*. A line of program is held in memory as two bytes which give the position in memory of the start of the next line, then two bytes which give the line number,



followed by the PETSCII codes of the characters or keyword which make up the program line. The last line of the program finishes with three zeros.

Program Notes

Line 140 The use of three spaces, an asterisk and three back-spaces is a useful way of making an input statement almost idiot-proof. If only *return* is pressed or any response other than 1 or 2, then Line 150 takes the program back to 140.

Line 160 This sets the value of *cb* at −1 (CBM 64) or 0 (8032). This allows the use later in the program of the statements *if cb then* and *if not cb then*. It is instructive to write a line such as *x=0:if x then print "y" or x=0: if not x then print "n"* and try different values of *n*, both positive and negative. This is a helpful introduction to Boolean logic, which can save space, as Lines 830 and 840 demonstrate.

Line 220 The second statement could have taken two lines — *if a$="y" then cg=cg+1* followed by *Line 225 go to 260*.

Line 230 The statement *if cb* acts as *if cb = −1*. This line opens the Vic printer in lower case mode.

Line 240 puts the 8023 printer into lower case mode.

Line 260 *b$* needs to be dimensioned for eight strings for the 8032, but for 31 strings for the CBM64.

Line 270 If for the CBM64, this line over-reads the eight items read in previously, and then adds the extra 23.

Line 330 The variable *fo* is used as a counter for *for* statements.

Line 340 Thus opens the file, checks to see that it is correctly accessed (*gosub 700*) and gets the first two bytes, which are not used by the program.

Line 350 This starts with a zero-step loop. Usually for-next loops have a step size, but if the step is zero, the loop keeps repeating until an instruction inside the loop makes *i* greater than zero. The purpose of a zero-step loop is to avoid backward jumps, which are time-consuming. When a loop is started, the memory position is put on the stack, and when a *next* is encountered, the loop is accessed immediately. In a backward jump, the program must be read from the beginning until the line number is found. Also in this line, two variables are set: *fl* holds the number of quotes, and *le* is the line length. Two bytes are read which are the pointer to the memory position of the next line. If the second is a null string, the end of the file has been reached, *i* is set to *1*, the program leaves the loop and goes to the closing line.

Line 360 Ensures that should more *nexts* than *fors* be found, Line 370 will not crash.

Line 370 Calculates the inset (*fo$*) of three spaces for each loop. Variable *sq$* adds six spaces, the length allowed for a line number and its following space. This line also gets the next two bytes which Line 380 converts into the line number, which is set at the start of the string *ps*.

Line 390 Adds the loop inset string and sets *le* (the length of p$) to its revised value.

Line 400 This is the start of a new loop, which deals with the rest of the program line.

Line 410 This gets the next byte. If it is a null string (*chr$(0)*) then the end of the program line has been found, the *p$* is printed, the flag for quotes is set to zero, *j* is set to *1*, and at Line 680 the program passes from the *i* string to the *s* string. The next 14 lines handle the character found in Line 410. If it is *chr$(34)* — quotes — the flag is adjusted. If it is *chr$(58)* — colon — outside of quotes, the string is printed by Line 680. If it is a character from *chr$(32)* to *chr$(127)* it is added to the string. If quotes are set and the character is *chr$(160)* or above, the character is added to the string, except when the convert flag is set, when a character 160 down the character table is added. If the character is *chr$(129)* — for — then *fo* is increased, and three inset spaces are added to the string. If the character is *chr$(167)* — then — three inset spaces are added.

Line 490 Ensures that only *chr$(130)* — next — is dealt with by the next two lines, which remove three spaces from the inset string, but ensure that the keyword is printed at least six spaces from the left.

Line 520 Sets *x$* as the keyword, and follows it with a space.

Lines 530 to 550 These deal with what is left, the graphics characters for cursor control, reverse on and off, etc, and the colours on the CBM64, the replacement for which are held in the *b$* array. Lines 530 or 540 calculate the position in the array of the replacement for the chr$ value of the character, and take the place of a large number of *if p<5 then x=1* type statements. The equation can be followed if it is remembered that if p=16 then (p>16) returns the value of zero, while if p 17 (or more) then (p−16) returns the value of −1.

Line 560 Puts the replacement into *x$*. Subroutines for adding characters to *p$* start at Line 600, which ensures that a space appears before a keyword.

Line 610 Checks what the length of the line would be if the character was added, and if it would be more than 80, the line is printed on Line 690, and a new line is started.

Line 620 Adds the keyword to *p$*, and calculates the length of *p$*.

Line 630 Reduces the indent if *chr$(130)* — next — if found, and adjusts the value of *fo*.

Line 650 Prints out the string *p$*, resets *p$* to its new length, and resets *le*.

Lines 700 to 720 These are a routine for trapping disc errors. The data statements hold keywords and the replacements for the graphics characters.

Multiply your moles

Moles . . . with not a defector in sight. Calculations on the BBC B **by Ron Price**

The program is designed to help chemistry students improve their knowledge of simple calculations involving the conversion of grams into moles and moles into grams. Most students have difficulty at first with this type of calculation and only with repeated practice do they become proficient.

Using this program saves them the tedium of tackling masses of written problems and also gives instant marking of their answers. Full instructions for use are within the program.

Program Notes

Procmenu Gives the titles of the six sections and enables the required one to be selected.

Procsetup Sets up the screen with the information required in sections two, three, five and six, and checks the answers given and prints whether correct or wrong.

Proccheck Indicates the number of questions correctly answered.

Procwkmg Prints the worked example of moles to grams with short pauses between each stage of the calculation.

Procmg Asks ten questions on converting moles to grams by reading *Data* on number of moles and formula of substance. The correct answer is also read from *Data* and compared with the inputed answer in *Procsetup*.

Prochmg Similar to *Procmg* except that the number of moles is chosen at random and is in the range 0.1 to 1.8. Line 720 is needed because the computer does not always give credit for a correct answer even though the inputed answer appears identical to the calculated one.

Procgmwk Prints the worked example of grams to moles in a similar fashion to *Procwkmg*.

Procgm Similar to *Procmg* except that the conversion is grams to moles.

Prochgm Ten questions on converting grams to moles but the number of grams is chosen as a random number between 1 and 100. Lines 1650 and 1660 are needed to round off the answers to two decimal places.

BARGAIN SOFTWARE

10 MELODY COURT, STONE ROAD ESTATE, LONDON W4 3AW
TEL: (01) 995 2763

HISOFT

ULTRAKIT £9·45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need: AUTO insert, full RENUMBER block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

DEVPAC £14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

PASCAL £25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. " I haven't seen any other compiler that could match Hisoft's Pascal"

All prices, UK delivered, relate to 48K ZX Spectrum versions.

HISOFT
180 High Street North

FONT 464
for the
AMSTRAD CPC 464

FONT 464 *is a font designer and character generator especially developed for the CPC 464 microcomputer.*

Design your own character fonts and graphic symbols with this very friendly and powerful package.

FONT 464 *allows you to create a new design or amend an existing one using set, reset, invert, reflect, rotate, inverse and even animation!*
Load and save character sets to/from tape, use the new character(s) from BASIC, design your own animated graphics – all this and more with **FONT 464**.

FONT 464 *is supplied with three interesting and amusing character sets for you to experiment with.*

✱ *All this power for: £7.95 inclusive* ✱

We also have available for the Amstrad CPC 464:

Hisoft Devpac – our full Z80 assembler and disassembler/debugger with more features than you'll ever need.

Hisoft Pascal – a virtually full implementation of Standard Pascal. Compiles and executes incredibly quickly.

Please write to Hisoft for more details of Pascal and Devpac on the CPC 464 or contact Amsoft with your order.

Calling long distance . . .

Your Spectrum & QL should be talking to each other . . . Alan Turnbull shows how

It is a fair assumption to make that most of the owners of the QL, like myself, already own a ZX Spectrum and have progressed from that machine rather than purchasing the QL as their first computer.

People in this situation will, most probably, want to take full advantage of the QL and ZX Spectrum networking facilities — *Qlan* and *ZX Net*, respectively.

This article, then, introduces a routine for use with the following minimum equipment: a Sinclair ZX Spectrum, a Sinclair ZX Interface 1, a Sinclair QL, and a ZX Net/Qlan networking lead.

The routine, when loaded into the QL, will enable the sending of ZX Spectrum programs over the network and the saving of them on QL Microdrive, with simple conversion done as well.

The program at the heart of it all can be seen in Figure 1. It receives listings of programs (ie, files generated by the Basic command *List*) from the ZX Spectrum, converts their format and sends them to QL Microdrive *mdv1*, ready for subsequent loading and editing with the QL commands: *Load mdv1 ‹file name›* and *Edit ‹start›, ‹increment›*.

Upon running the program in Figure 1 on the QL, you will be presented with a title screen and prompt: 'Enter the name of ZX Spectrum Program:', to which you should reply with the name of a file to be generated on QL Microdrive *mdv1*, and by which you wish the program to be called.

A file with this name will be generated and you will be prompted with the message: 'Receiving and accessing Microdrives'. At this point, you should have the program you wish to send loaded into the ZX Spectrum and execute the direct commands listed in Figure 2.

A delay will follow, the duration of which will depend on the length of the program to be received, and the QL Microdrive will whizz around quite a lot. The whole process is completed when the QL display reads 'Reception completed', the flashing cursor re-appears and the QL Microdrive *mdv1* stops.

The process can be checked by executing on the QL the command: *Copy mdv1 ‹file name› TO scr*, whereupon the listing will be displayed on the QL screen. The ultimate test is the *Loading* of the file as a program from *mdv1*. You will find in practise that a lot of program lines will have the keyword *Mistake* inserted in them. You will have to go through the program with the multiple edit command, changing obvious syntax violations. The most common will be that of having no brackets around arguments for functions.

The program in Figure 1 has a set-up procedure that places expansions of the keywords in an array. Certain keywords on the ZX Spectrum do not work on the QL, these have been prefixed by *ZX*, so that you may, if you wish, give definitions for them in *Def Fn* and *DefProc* constructs, where appropriate, keywords have been changed to their new name.

Obviously, only limited conversion can be done because of the great difference between the computers. You will be amazed, however, at just how many of your simple ZX Spectrum programs will travel across to the QL.

REAL ARCADE ACTION! FROM JETSOFT

FAST LOAD 2 minutes

BMX STUNTS

BMX STUNTS Based on the original arcade game this action packed game challenges your skill over six tests, straight race, wheelie, ramp jump, slalom, bunny hops and the ultimate test over a V W beetle in the Beetle ride

FAST LOAD 1½ minutes

Cavelon II

Can you destroy the wicked wizard of castle Cavelon? Only after negotiating the six levels in his castle. Collect all the door pieces before you can attain the next level. Helpful at hand on this all thrills, all action, real arcade game, when excalibur appears achieve indestructability

Quarl

27 levels of increasingly difficult real arcade action. Based on the game Bongo, you must avoid the chasing dinosaur pterodactyls, falling rocks, native spears and bouncing Bongos. Negotiate rope bridges and erupting volcanoes, picking up the treasures of a lost civilisation as you go - and finally cage the dinosaur - if you can!

John Menzies and Boots Stores

For BBC Micro and Electron Users

SUNSHINE

They turn micro users into big operators.

Sunshine's great books for the BBC and Electron help you make your favourite micro into a mighty machine.

Read, and discover how to program, to create music, to draw graphics, to do maths, to produce robots and even how to give your micro artificial intelligence.

Sunshine's best-sellers are at all good bookshops now. Or order, using the coupon here. And transform you, and your micro, into something special.

Open Forum

We are always actively seeking programs for publication — either for Open Forum, the machine pages or Star Game. When sending in a program for consideration, a clear program listing should be sent, together with, wherever possible, a saved copy on cassette. Documentation — usually not more than 1000 words — should start with a general description of the program, what it does, and then some detail of how the program itself is constructed. We pay very competitive rates, according to the length and nature of the program and the quality of the accompanying documentation.

Clock

on QL

This is a program utilising the QL 'clock — whilst it can't show the seconds actually ticking by while we're working with another program it keeps going and is always spot on whenever we type in *time* to set it in motion again.

I've used high line numbers for the Procedure time and put it on channel 13 so it's out of the way of everything else. (Hence all those hash-13 designators which are essential in this kind of exercise.)

Lines 32738 to 32741 give a narrow green strip slightly above the usual TV display panel. This position can be modified to suit individual receivers by altering the last figure (the y co-ordinate) of 32738. I find 4 works best for me, but you can go up or down in steps of one or two until you find the setting that's best for your particular equipment.

The *Repeat* cycle displays the date and time in yellow characters on a black background. *Day$* seems to supply the day of the week automatically; but *Date$* needs to be reset each time you power up. The formula is *Sdate* (ie, set date) followed by the year, month, day, hour, minute and second.

For example: *Sdate* 1984,8,13,18,0,0 stands for: 1984 Aug 13 18:00:00

Lines 32725 to 32729 open a window for the standard displays of channels 1 and 2 with the addition of a green border. When you are working on a program, *Break* and *time* let you see the seconds going by without disturbing your display in the main window.

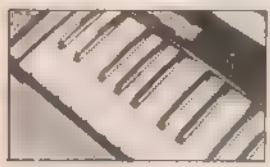
The Music Box



Play back

Those of you who are interested in pursuing the field of computer music further could do worse than buy a copy of Hal Chamberlin's mammoth book — *Musical Applications of Microprocessors* (Hayden Book Company, New Jersey, 1980). I shan't be plugging my own book until it comes out under the PaperMac imprint next year.

Chamberlin's book, although already showing its age and not aimed at the hobbyist, probably gives you the most comprehensive possible introduction to the field. Read it, and you'll understand just how exciting and complex the subject is. It weighs in (and I do mean weigh) at 681 pages and will set you back the price of a reasonably good meal for two (wine included, though unfortunately, not with the book).

Now comes the news that the author of the bible has been busy soldering and has produced the DigiSound 16, a 2-channel, 16-bit digital processing unit for use with any computer that has two eight-bit parallel ports (available, for example, on any computer using a 6522 interfacing chip, which is to say any 6502- or 6510-microprocessor-based computer such as the BBC or Commodore).

What's exciting about the DigiSound is that it offers parallel processing which has got to be the next big thing, since serial processing, although electrically more reliable (you can use longer leads), is either too slow to be very useful or becomes unreliable.

The synthesiser manufacturers' MIDI standard for plugging computers into electronic instruments is a serial system which compromises between speed and reliability by using a data transmission rate of 31.5 Kbaud. This is above the maximum rate for RS-232 and similar standards, which is 19.2 Kbaud, and so requires additional circuitry. In principle, a parallel system (as used, for example, with Centronics printers) should be fairly easy to implement and could be fast enough to provide really phisticated sound processing. The chief problem will be that you wouldn't want to take a parallel system on stage with you. For that purpose, MIDI — with its simple cables which can be several meters long without loss of signal — will doubtless remain, although a serial-to-parallel converter, allowing MIDI instruments to be controlled by parallel-wired computers, should not be beyond the wit of the hackers and hobbyists.

Anyway, to find out about the DigiSound 16 (which can be used for digitising, sampling, sequencing and playing back sounds), write to Micro Technology Unlimited, 2806 Hillsborough Street, Raleigh, North Carolina 27607, USA.

Gary Herman

The Music Box is a new weekly column with news, reviews and readers comments on all aspects of micros and music.

Any readers with experience of computer music making or companies with new product news are invited to write to: drop a line explaining what they're doing to: Gary Herman, The Music Box, 12-13 Little Newport Street, London WC2R 3LD.

FOOTBALL MANAGER

Designed by Kevin Toms

for the Commodore 64

Some outstanding features of the game

- Matches in 3D graphics
- Transfer market
- Promotion and relegation
- F.A. Cup matches
- Injury problems
- Full league tables
- Four Divisions
- Pick your own team for each match
- As many seasons as you like
- Managerial rating
- 2 skill levels
- Save game facility
- Financial manipulations
- 64 teams and
- You can even be sacked!

Put your micro to work, at home.

If you reckon there's more to your micro than playing games, but you're baffled by word processing and confused by spreadsheets, then take a good long read of Mike Grace's new book.

Home Applications on your micro cuts away all the confusion surrounding the ideas and ideals of the micro at home. It shows you the practical uses, with everyday examples that are within the reach of every micro owner. You'll discover how a database helps you with your domestic chores, and with your hobbies. You'll learn why word processing is worth your while, and how spreadsheets are tailormade for your personal finances.

This comprehensive, jargon-free book can help you to find out exactly how your micro can help you. Don't leave your home micro without one.

Arcade Avenue

Heavy hype

What has happened to Mikro-gen? After producing a series of what can only be called average programs they have suddenly leapt to the forefront of arcade action with their excellent Wally Week series. If, like me, you were taking the adverts with a pinch of salt after the fuss about *Laserwarp*, rest assured that *Automania* really is superb and *Pyjamarama* is even better. In fact, I think the latter is my current favourite Spectrum game.

Another heavily hyped new release in the arcade adventures table, is Elite (formerly Richard Wilcox) Software's *Kokotoni Wilf*. It's a matter of opinion whether or not it lives up to all the claims about it. I find it a trifle slow but the different time zones really do make the graphics more interesting and it is fiendishly difficult to play. Unlike JSW there is no problem seeing how to get at most of the objects — rather the problems arise because it needs exact positioning and control of Wilf ■ avoid hitting the monsters. Anyway it certainly seems to work because I have had a couple of letters from Simon Clark of Watford and Charles Standford of Mansfield who are both more than lavish with their praise.

"I was wandering around in the second time zone when I discovered a secret passage in the castle. This is located in the bottom of the moat and emerges in the cellar underneath the castle. The reason I am writing this is that having reached the third time zone I can't seem to find a way into the top left hand screen. Does anyone know of a secret passage that would help me?"

Whilst on the subject of arcade adventures, congratulations to Dave Allen of Roche in Cornwall for finishing *Rapscallion* (is he the first?) and thanks to M Parkes of Leeds for telling me the way to get further in *Monty Mole*. Apparently the trick is to drop on to the railway truck and keep running until you reach the next screen.

Incidentally I think I mentioned before that I welcome your comments on what games you think are brilliant and which ones are awful. We can't review every game and we certainly can't test them to the same degree as you can at home. So thanks again to the above and also to Gary Burrows of Halewood in Liverpool who writes "Avoid the following two games like the plague – they score zero for playability: Melbourne House's *Terro Daktil 4D* and Imagine's *Cosmic Cruiser*." Gary also sends in these high scores — *Penetrator* (Melbourne House) 105,260; *Jumping Jack* (Imagine) 8228 with 13 hazards; *Chuckie Egg* (A&F) 202,720 on level 20.

Tony Kendle

The Arcade Corner ■ a new section for anyone who enjoys playing arcade games. ■ you have any comments from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write ■ Tony Kendle, Arcade Avenue, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Message

on Dragon

This secret message program uses two arrays as dictionaries: one to code and one to decode. The program quickly produces code direct to tape, the decoding is to the screen one screen full at a time.

Lines 110 to 160 creates the dictionaries and once created should be saved to tape as once lost can not be duplicated. Further copies can be made using *Save Code* 2. Lines 170 to 210 save the code. Lines 220 to 270 load the code from tape. Lines 280 to 380 load the message to tape as it is typed in, you will have to wait whenever the tape is running. Lines 390 to 470 decode the message and print it on the screen.

Variables

I array identifier, constantly changing
A letter identifier
S number of letters on the screen
C$ code name, the name you give the saved dictionarys
EC (27,27) coding array, totally random
DC (27,27) decoding array

Only Alpha characters can be used, all others are treated as spaces. The code is a substitution type made more difficult to crack by the use of a different code for each letter, selected by the value of the decoded letter in the decoding array I = DC(I,A)). The program uses just over 9K.

```

Microradio

GW6JJN

Dots and dashes . . .

So that Vic 20 owners do not feel left out in the cold as one reader recently complained to Microradio, I shall concentrate this week on the software available for the Vic 20 in the radio computing line.

First I shall deal with morse code and a program from EP Electronics of 4 Housman Walk, Kidderminster (0562 753893). This program is designed as a morse reader and JEP have published a similar program for the Spectrum which was reviewed in Microradio some months ago. The idea of using a computer to decode morse is not a new one by any means and the original problem of timing still remains. Computers, being very precise machines, find it difficult to cope with a transmission such as morse code, where the rate of sending can vary several times within a single word. Fortunately, many morse transmissions on the short wave are sent by machines such as those found in automatic weather stations. On the amateur bands, however, the standard of morse as far as a computer is concerned, leaves much to be desired. Morse code came before digital computers were about and is designed for people to people communication.

If you do wish to know what all those dots and dashes are saying without learning morse, then plug in your Vic and off you go. JEP mention that a small interface is required for the Vic which consists basically of a transistor and a couple of diodes — total cost about a pound and the work of an hour or so to construct. Full details come with the tape.

Once all is set up and the tape is loaded, one is in the 'read' mode and the screen displays *Ready*. Then you should tune to a reasonable sounding morse transmission on the radio receiver. If all is well then sensible words should start appearing in some recognisable language on the screen. Don't expect necessarily that it will be in English. If nothing happens, then it means that the volume is probably too high, as too much background noise will produce rows of Es and Is. If the program is faced with too many changes in morse speed it will lock-up, although a reset facility is provided.

There is a serious and fairly successful attempt in the program to cope with the speed variation problems and the software will track the changes within limits. In short the program works well provided that the signal is reasonably clean and consistent. The decoding of morse is a tough algorithm at best and JEP have done a good job for Vic owners, there is no doubt about that. The real question is whether it is worth using a computer to decode morse. Until the day comes when all morse is sent by machine, it will be a struggle. If a machine is to be used to send morse, then why not use RTTY, AMTOR or Packet Radio — all of which are much more efficient, faster and less prone to error.

The second program for the Vic is the G4BMK Vic 20 RTTY package. This program is very similar to the CBM64 version recently reviewed by the same author. Vic 20 RTTY costs £10 for the tape and instructions and is excellent. More details from Grosvenor Software on 0323 893378.

Flash

on Spectrum

This is a short routine to be poked anywhere in Ram. When called (just use *Usr* address) all the character positions will be either set to flash or reset depending on their original state. Colour and brightness are unaffected.

The subroutine can be used to simulate an on screen explosion by calling the subroutine twice with a short delay between call. You can also try changing bit 9 from 128 to 64; this will change *Bright* instead of *Flash*.

Book Ends

Book *Learning With Adventure Programs* **Price** *£5.95* **Micro** *Mainly Spectrum and Commodore 64, plus BBC* **Supplier** *Melbourne House (Publishers) Ltd, Church Yard, Tring, Herts.*

While most so-called educational programs are based on arcade games, Rosetta McLeod's book investigates the teaching potential of three adventures, *The Hobbit*, *Valhalla* and *Snowball* plus the adventure writing utility, *The Quill*.

It is an interesting initial discussion document, based on classroom experience and aimed particularly at the English teacher. However, with only 86 pages it is rather expensive, and its orientation towards schools makes it less useful for parents working alone with their children.

Greater discussion of the deductive learning process involved in playing an adventure would have broadened its appeal, but it is unique and should prove valuable for teachers.

Book *Logo Programming* **Price** *£6.95* **Micro** *Any able to run Logo* **Supplier** *Century Publishing, Portland House, 12-13 Greek Street, London W1V 5LE.*

The *QL Advanced User Guide* is written by the same author as the equivalent book on the BBC, which is well respected. Mr Dickens did a lot of work when he produced the Beeb version to find out his facts, but he did very little work for the *QL* version, as it is a direct re-print of Sinclair's own *QDOS* Manual.

The first few pages give a very brief reminder of the 68008 instruction set, followed by the *QDOS* system calls, though some are a bit skimpy, and the errors and inaccuracies in Sinclair's manual remain. Most of the vectors in the *QL* ROM are also explained, but four of them get no mention, presumably because Sinclair's manual ignores them.

A very good description is given of the way SuperBASIC works, including how to add your own machine-code procedures and functions, and at the end of the book a complete hardware/software description is given of a parallel printer interface.

Throughout the book reference is only made to the *JM* ROM version, and several things covered do not work or even exist in the earlier *AH* version, which some owners still have. If you do not have the official *QDOS* manual then this book will be helpful to you, but there is little additional information in it.

Book *QL Advanced User Guide* **Price** *£10.95* **Micro** *QL* **Supplier** *Adder Publishing, PO Box 148, Cambridge CB1 2BD*

This book will not teach you to program in Logo, but neither will you need access to a computer running the language to find it interesting.

For many people, Logo links children and 'turtles'. However, while the book investigates its educational role, it goes beyond graphics to concentrate on the language's philosophy and its ability to not only develop programming skills, but also an understanding of logic in the world at large.

Concluding with several useful appendices and many examples of programs, it should stimulate any programmer to consider his or her usual language.

Alice IN VIDEOLAND

PURE MAGIC!

Join Alice in her journey through Videoland - an enchanted place populated by strange creatures such as bread-and-butterflies and pipe smoking caterpillars, where little girls change size and flamingos turn into croquet mallets!

Alice in Videoland is a revolutionary new concept in entertainment for the Commodore 64, incorporating some of the finest graphics ever seen on any home computer, accompanied by a charming musical score. There are four different game scenes involved, and your performance in earlier ones will affect your ability to get through later ones and determine your eventual total score.

Scene One - Stunning title page graphics give way to the first game scene as Alice falls into the rabbit's warren. Score points for collecting the objects to be found there - including keys to open doors, bottles to make her smaller, cakes to make her bigger!

Scene Two - Out in the garden the Cheshire cat looks on as Alice meets the pipe-smoking caterpillar. Help her to catch the bread-and-butterflies and the rocking-horse flies that change into the balls used in the croquet game in the last scene!

Scene Three - Alice is a pawn in the chess game where her opponents are the Jabberwocky and Tweedledum and Tweedledee. Help her across the board by protecting her with your White Knights!

Scene Four - The most bizarre croquet game ever! Help Alice hit the balls through the playing-card-soldier hoops before the Queen of Hearts stomps on them!

Alice in Videoland is available for the Commodore 64 on disk - £12.95, and now on cassette - £8.95.

Alice in Videoland features graphics created with the Koala Pad.

Tony Bridge's Adventure Corner

Do-it-yourself

Those of you who have been following The Grand Elf in his wanderings through Adventureland will remember the names of Alan and Daphne Davis. They have written to me over the months with maps and hints on *The Hobbit* and Hewson's *Quest*, as well as other adventures that they have completed.

Now, along with Sue Gazzard, who was also an occasional correspondent (and author of *Lords of Time*), and Hugh T Walker who, my spies tell me, is also writing his own adventure, Alan and Daphne have decided to join the ranks of adventure-writers, and produce their own. Alan was always interested in character inter-reaction, and this is a strong feature of his program, *The Journey*, now released by Temptation Software.

The adventure runs in real time, so that, should the player sit doing nothing, the world around will carry on with its affairs; the odd character will wander past as you wonder what to do, and, if you're not quick enough in typing in a command, it's quite possible that the character will wander off before you can *Kill*, *Kick* or *Rob* him!

As well as other characters having a life of their own, they may be affected by the player — for example, one character may be directed to fight another if the player is too weak or prudent to undertake the task himself: and another character's inventory may be requested.

The scenario is basic sub-Tolkien — your quest is to seek out the legendary White Ship of the Elves and be carried to a distant land where your true destiny as an adventurer may be fulfilled (sounds like Majorca!).

After a nice title screen, the adventure starts with you, the player, being awakened by the birds. After exploring the first few locations, you may be forgiven for thinking that this is a text-only adventure — but, lo and behold, suddenly there are graphics! And they're not bad at that.

The predeliction of the author may be seen in the Status table which can be called up at will — your character (and indeed, all the others) possesses three attributes: Intelligence, Strength and Experience, each of which will be affected as play progresses, sometimes decreasing and sometimes increasing. Completion of this adventure is going to take quite some time, so there is a high-speed *Save* and *Load* facility available.

As I said before, other characters will go about their business while you decide what to do. In practice, the flashing input cursor at the bottom of the screen stays active for about 20 seconds, after which time control is taken away from the player for a couple of seconds, while all the other creatures of this world are given their turn.

This isn't too much of a hardship, though, as all the player has to do is type in one letter, and then can go away and make a cup of tea, secure in the knowledge that the program will wait "4E4" (as Phipps would say) for the *Enter* key to be pressed.

The location descriptions are a little sparse, and I quite often found myself in an endless loop in which map-making proved impossible — maybe this is part of the author's attempt at cunningness, but I find this kind of deviousness merely frustrating.

Having said all this, I have to say that there is a fair amount of atmosphere in *The Journey*, with runic codes to be deciphered (*examine* everything, as clues to the code are likely to turn up anywhere!) and those cursed characters wandering in and out all the time. Alan Davis has kindly included, on the cassette inlay, a complete list of the words you'll need (or synonyms thereof) to complete the adventure. So no more wondering how to open a door; if the word isn't in the list, you're on the wrong track anyway.

The usual verb-noun combination is recognised, but in certain cases the player may type in up to four words, or 256 characters. I would say that this is a very good compromise between the inflexibility of a mere two words, and the overkill of 256 characters.

So, *The Journey* is a pretty good implementation of a Hack and Slay Questadventure — I haven't, yet, got too far with it, but this sort of program at least keeps the player awake, so there is a good chance that I will persevere and give you a progress report in the near future. I feel that the game is a little out-of-date now — but Alan and Daphne Davis will, I hope, come up with something a little more innovative, now that the hard work is out of the way. Temptation Software, Cinque Ports Street, Rye Sussex.

I said the Davis' were a keen couple of adventurers, and I have just heard from them again — this time about *Lords of Midnight* and *Sherlock*. Alan says: "*Midnight* is wonderfully complex and visually stunning. Morkin's Quest is perhaps a little bit too easy, but if you get him stuck safely out of the way somewhere, with the Ice Crown in his pocket, you can more or less forget about him and get on with "The Epic"! A nifty challenge is to set yourself the target of obliterating all trace of Doomdark's armies without losing a single Lord of the Free. I nearly managed it, recapturing every Keep and Citadel (leaving Ushgarak till the very last) but, sadly failed.

"And as for *Sherlock* — oh, glorious! All the delectable Philip Mitchell bugs are there; unexpected crashes, sudden screensful of rubbish — but who cares? We are utterly baffled. How on earth do we *prove* that Major Foulkes was in the Opium Den the night of the murder? And why won't Lestrade believe that Tricia Fender blackmailed Mrs Brown even when we have the incriminating letters?"

Don't ask me, Alan, I haven't got far with the thing yet! But I'm sure that some adventurer out there will have solved the puzzle — if so, let me know.

I've spent a lot of time on just one new adventure this week — partly because it is an interesting game in its own right, but also because it's nice to see regular readers having a go! Next week, I'll be looking at some new programs, concentrating on more of the latest crop of Quilled adventures.

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Peek & Poke

Memory space

D Leitch of Leven, Fife, writes:

Q I am writing a games program which requires a high resolution background to the game. I have achieved this but it takes a lot of memory space. I have seen on a few tape magazines for the Spectrum *Screens* which have been stored in memory and are able to be called on very quickly.

I am wondering how this is done and how much memory it requires. I have a little knowledge of machine code.

A Screens can be stored in memory in the same way as any other items of data. They are normally stored as pieces of code, ie, above *Ramtop*. To store a whole screen takes 6912 bytes of memory, 6144 bytes for the display file and 768 for the attributes. Screen display switching is normally done via machine code.

What happens is that the desired screen is copied to the Spectrum display and attribute files. If you are interested in storing partial screen displays then Bob Pritchard's article in *PCW*, Vol 3 No 37 entitled 'Screen Savers' is one that you should read.

Repair service

N G Tierney of London, writes:

Q In March I had my 16K Spectrum upgraded to 48K. Until recently it has been working normally but now it will only load 16K programs. Also when you type '*Print In 31*' it prints 255 when it should print 0. The company which upgraded my machine was Computer Add-ons and I would be grateful if you could trace their new address as they seem to have disappeared.

A No luck with the address I am afraid. In any case this is no help in getting your Spectrum fixed.

There are a number of firms who repair Spectrums very cheaply. TV Services, of Cheston Mill, Frenches Road, Cambridge, are very reliable, and are not likely to "rip you off". I suggest you write to them and ask them for a quote. Another company you could try are Mancomp, of Printworks Lane, Levenshulme, Manchester.

It should not cost you more than £20.

Corrupted program

J Enderby of Farnborough, Hants, writes:

Q I wonder whether any of your technical staff or readers can help me? I have a 48K Spectrum which I have found to be a powerful and reliable machine, but which has one major failing in that it seems very prone to lose the memory due to static electricity.

The problem occurs if you touch the TV screen and so discharge the build-up of static, which in turn seems to send a charge down the aerial lead and causes the program to be corrupted. The interference cannot be coming down the power lead because it still occurs even when the Spectrum is running on battery power. As the machine is left running all day and is used by various people for a business application, I cannot simply ensure that nobody touches the screen or that the aerial is removed before the dust is removed from the TV screen.

Can you suggest anything that perhaps could be fitted into the aerial lead?

A The problem of static build-up around TV sets is not new to me, however the effect you describe is quite unusual. It would seem to me that the environment in which the TV/Spectrum are located must be conductive to the production of static.

There are a number of anti-static sprays that can be used, on the carpet normally, that help to reduce static levels quite considerably. The possibility of using some sort of static filter in the aerial lead is not one that I would follow up. Filtering signals, of any sort, is unlikely to be of benefit to you.

You could however try connecting the Spectrum to the TV via an aerial split box. These devices are normally used when you have two aerials that you wish to connect to the same TV and you wish to switch between them without having to disconnect and reconnect your TV aerials. They can be purchased (for around £2.00) from any TV shop.

Reversed quotes

C Barnes of Nottingham, writes:

Q I have a CBM 64 and at the moment I can't get reversed characters in between speech marks in the program that I'm writing. When I press *Ctrl* and *9*, I get an *R* symbol. Will this allow me to print in reverse? Without the speech marks I can print in reverse. Is this a bug in my machine?

A No it is not a bug. To get characters within quotation marks to be printed in reverse, you need to press *Ctrl* and *Rvs*. This will cause a reversed *R* to appear inside the quotes. This will make all following characters print in reverse (negative) mode. To turn this reverse feature off you need to press *Ctrl* and *Rvs/Off*.

Lynx expanded

Mrs M W Grierson of Newcastle-on-Tyne, writes:

Q At Christmas we purchased a Lynx 48K computer believing it to be a good expandible system, produced by a growing firm. We are now surprised to hear of Computers going into liquidation.

Under these circumstances, do you know if there are still stocks of Lynx peripherals and software available, and where to purchase them? Also, if stocks of hardware are limited, what would you advise should be our priority to purchase in order to expand the system? Do you know if the firm will be bought out?

A The Camputers failure is yet another sad chapter in the history of British micro computing. Added to the recent failures of Dragon, Imagine, etc, it paints a depressing picture for the would-be consumer.

If a buyer for Lynx does not emerge and this seems unlikely months on, then I could not in all honesty advise you to expand the system at all. In my view you would merely be throwing more money away in the long run.

One key press

David Fox of Sheffield, writes:

Q I am writing a game on the Spectrum that has to have more than one key pressed at the same time. Could you please tell me how to do this, as on the Spectrum you can only press one key at a time to make anything move.

A The Spectrum only allows one key to be detected via the *Inkeys* function that is true. However, the *In* statement allows for the detection of simultaneous key depressions. Pages 159-160 of the Spectrum manual tell you which value of *In* you need to address particular keys, and also how to detect multiple key depressions. If you are after high speed keyboard reading then I recommend the 'Geoscan' routine in David Webb's book *Supercharge your Spectrum*.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Phil Rogers and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW*, 12-13 Little Newport Street, London WC2R 3LD

WD Software
QL Utilities (£10 on Microdrive)
This package offers single-key loading, running or deletion of files, multiple formatting of cartridges, and auto backup of files from one or more cartridges to another with optional over writing of name/sector. In addition, a directory of files can be viewed without screen swapping. No VERIFY prompts are necessary. QDOS does this automatically. New includes directory printout and "append" to print any or all files on a cartridge with optional stored titles. Owners of the earlier package can update by sending OLD cartridges and 25p.
CURRENT SPECTRUM PROGRAMS
Tradewind (£5 Cassette)
Buy a ship, provisions and cargoes to trade between the harbours of the Coral Islands. Make a fortune if the weather and pirates let you live long enough to master seamanship and economics. A strategy adventure game with graphics for 48K
Jersey Quest (£5 Cassette)
Following an accident, you are stranded in the labyrinth of time and must find your own way back to the Present with the aid of persons and objects from Jersey Folk. Meet the Black Horse of St Ouen, the Dragon and Knight of La Hougue Bie, the Black Cat of Carrefour a Cendre, the Witches of Rozel Manor and many others. A text-only adventure for 48K in machine code (Quilt)
Morse Tutor (£4 Cassette, £8.50 Microdrive)
A 19 words/minute, variable spacing number of groups of random letters, numbers or mixed, random sentences, own message, single characters switching pause/manual, variable pitch. FEEDBACK via screen, printer or SPEECH (phonemic alphabet via Currah u-Speech on 48K version. 16K and 48K versions on tape cassette. 48K only on Microdrive cartridge
Spectrum Programs on Microdrive
All the above are available on Microdrive cartridges at a price of £4.50 for one cartridge + the price of each program as shown above. E.g. two cartridge with Tradewind and Morse Tutor would be £13.50. As a BONUS, Gavin Monk's Indexed Loader is included FREE with each cartridge

BASIC+ on microdrive

BASIC+ adds commands and abbreviations when entering a BASIC program. Commands are interpreted when the program is run, not when entered. Therefore, the program can be edited using standard BASIC. Error messages are improved. Programs can be compressed to fit more into memory. Machine code routines can be included in BASIC programs. Full Spectrum support. Runs in 16K RAM and up. Available on microdrive and 48K Spectrum.

For a copy of BASIC+ plus instruction booklet, return this advert with a cheque for £4.95, or £5.95 if you write for the address below for more information.

WANTED 48K SPECTRUM, Alphacom or any printer, keyboard, interfaces, recorder, s/w etc. Any combination considered Tel 0294 3369 (will collect) Rick Bennett.

SPECTRUM PROGRAMMABLE joystick + ▮▮ s/w cassettes for printer with paper. Tel 01 367-1427

WANTED CHEAP computer with RS232 interface or simple RS232 terminal. I will pay around £50 + postage. Phone 0903 42013 (ask for Richard). Needed urgently for testing of computer bulletin board.

SWAP CBM 64 Pet + cash for Amstrad. Also Spectrum s/w for sale. May consider other computer. Tel: Tom — 07842 45491

WANTED EXTENDED BASIC for TI994A or other hardware. Details to Llangefni, N. Wales. 724-636

SPECTRUM 48K + hardware. Cost over £400. Willing to swap for BBC B. Tel: Hounchurch 57487

WANTED CBM64 DISK drive + printer. 0952 86333

WANTED: MAZIACS, Nightflite II, Heathrow, Ant Attack or Chuckie Egg for 3D Seiddab Attack, Atic Atac or Jack And The Beanstalk. Phone High Wycombe 713899 (after 7pm)

WANTED HIGH RESOLUTION Microvitek colour monitor preferably for Sinclair QL. Tel Mendlesham 7130 evenings.

WANTED MIRACLE'S WS2000 multi-baud modem with without autodial. Will pay £70-£80 depending on condition. Phone Rory on 01-444-9585 after 4pm.

WANTED ZX-80 + manuals + wires + all leads. Must be in good cond. Will pay good price. Write to: Michael Wasian, Babenhausser Str. 200, 4800 Bielefeld 1, West Germany.

SWAP ORIC 48K with cover, software, books, tape etc for any interesting computer, peripherals, working or not, or cash. Phone Harrogate (0423) 65270 evenings

WILL SWAP ATARI 400 + Basic + program recorder, Quickshot joystick and £180 of software inc Sub Commander for CBM 64 + C2N, or sell for £190, phone Castletown (Caithness) 689.

VIC 20 STARTER pack swap for TI99, 4A or Atari games console. Write 33 Lower Ellacombe Church Road, Torquay, Devon

ELECTRON USERS. Penpal, to swap hints, progs, and games. Interested write to: Steven Hayes, 36 Brothers Street, Blackburn, Lancs. BB2 4SR or phone (0254) 29215, age 13+

WANTED BBC B. With out DSS and Disk Drive. Interested in w/p software and firm ware. CASH PAID. Aylesbury 25504

WANTED EDUCATIONAL s/w for Spectrum. Child of 5 years old. Tel 021 430 3856.

WANTED VIDEO CHESS for TI99/4A and I am gamble, Derby. 0332 76 72 76

WANTED CBM 64, BBC, Acorn, Electron or Spectrum. Swap for Bellwood Guitar Electric + Amplifier + £15. Or might swap VIC 20 + £1000 of accessories. Tel: 061-643-5856

WANTED BBC 'B', for cash purchase 0723-360456

SWAP YOUR VIC-20 + C2N for CBS, 1 Cobra 21FM, 1 DNT MT40 FM. Also power mike Magmount antennae + SWR meter. Tel: Rob 505 8989 (Woodford, Essex)

ADVENTURE HELPLINE

Lords of Time on Commodore 64. How do you get the small icicle? How do you get out of the pit? Iain Pocock, 15 Parham Close, Littlehampton, West Sussex.

Philosophers Quest on BBC. I can't get down the crushing passage. How do you get out of the endless slides? Scott Kelly, 12 Pollock Road, Bearsden, Glasgow.

Devil's Island on Spectrum. How do you get out of the courtyard? Mrs M Taylor, 804 Ben Jonson House, Barbican, London EC2.

Colditz on Spectrum. How do I get off the window-ledge with the rope? I have broken the bars. Do I need any more objects ▮ help me? Timothy Gibbens, 7 Buckstone Drive, Edinborough. Tel: 031 446 3693 after 7pm.

Temple of Vran on Spectrum. After travelling through time I become stuck. Do you cross the lava flow? If so, how? Jonathan Monico, 31 Tyne Crescent, Bedford.

Perseus and Andromeda on BBC. I am unable to find the sword. I have located the sack, water, discus, sandals, (two pairs), shield and helmet so far. Mrs H J Noels, 'Wayside', 48 Jbouncers Lane, Prestbury, Cheltenham, Glos.

The 'O' Level Caper on Vic20. I don't know what command to use to swap the papers at the end. David Beal, 186Nithsdale Road, Pollokshields, Glasgow.

Smugglers Cove on Spectrum. How do I passed the mermaid, the padlocked door, the stone slab, the barrier the pirate and the room with acid? Tony Grist, 77 Beech Rjoad, Bedford, Middx.

Colossal Adventure on Spectrum. How dso I get past the dragon? How do I get through the skull in the passage? Graeme Rose, 6A Broomberry Drive, Gourock, Inverclyde.

Pharoh's tomb on Spectrum. How do I cross the river? How do I get out of the maze? Mike Richards, 8 Victoria Road, Roche, Cornwall.

Quest Adventure on Spectrum. How do I enter castle oops after unlocking the door with the long key? Peter Ellett, Grafton Plough Lane, Kington Langley, Wilts

The count on Vic20. The vbat laughs at me as I keep lighting cigarettes as the coffin disappears, Danny Jones, 4 Verney Street, Neasden, London NW10.

Sphinx Adventure on BBC. I can't find the mouse. Ann Trotman, 130 South Street, Lancing, West Sussex.

Gems of Stradus on Amstrad. I can't find the food. How do you get

Feasibility Experiment on Spectrum. I can't open the studded door and I can't light the lamp. P Woodhouse, VD Weijdgnlaan 22, 2211 JL Noordwijkerhout, The Netherlands.

Snowball on BBC. How do you get past the nightingale and get past the blue room (up the trap door). Simon Russell, Halstead, Jubilee Road, Worth, nr Deal, Kent.

Knights Quest on Spectrum. How do you kill the snake? Debbie Barbé, Vista du Guet, Cobo Road, Castel, Guernsey, Channel Islands.

Planet of Death on Spectrum. How do you get through th force field? Mark Marvell, 81 Southfileds, Letchworth, Herts.

Pirate's Cove on Vic20. I have the keys and the sack of crackers, but the crocs down the pit won't eat them. David Marriman, 16 St Peters Close, W Meads, Bognor Regis, W Sussex.

Magic Mountain on Spectrum. I can't find a way across the gloomy chasm. P Woodhouse, VD Wetdenlaan 23, 2311 JL Noordwijkerhout, The Netherlands.

Twin Kingdom Valley on BBC. How do you get the master key from the dragon in the north turret? Jason Sidwell, 92 East View Road, Wylde Green, Sutton Coldfield, W Midlands. Tel: 021-355 6588.

Trial of Arnold Blackwold on Amstrad. When I get in the door, I cannot move because of the dark. How do you turn the lights on? Susan Patten, 39 bates Road, Brighton, Sussex

Kingdom of Hamil on BBC. How do you get the documents from the vampire's coffin? What use is the huge egg? Bill Stephenson, 81 Somerset Place, Stoke, Plymouth, Dorset.

Lost in Space on Dragon. I cannot get the pie out of the 'junk fdood gizmo'. David Price, 9 YUork Avenue, Ebbw Vale, Gwent.

Hobbit on Spectrum. I cannot get out of the goblin's dungeon. Peter Owen, Ronshea, Wyche Lane, Bunbury, nr Tarporley, Cheshire.

Heroes of Karn on Commodore 64. I can't pass the lizard or the pirate . I can't get the sword out of the stone. Michael O'Connor, ■ Gossamers, Garston, Watford, Herts.

Denis through the Drinking Glass on Commodore 64. How do I get past Norman Fowler and how do I catch the train? dave Malcolm, 10A Gordon Road, West Bridgford, Nottingham.

Pirate's Cove on Vic20. How do you remove the lumber and the anchor to build the pirate's ship? M Taylor, 16 Gleeson Drive, Orpington, Kent.

Hobbit on Spectrum. How do I get past the dragon after I have the gold and get back? Richard Hodgson, 24 Gun Lane, Knebworth Herts.

224Planet of Death on Spectrum. What do I do in the room with the loudspeaker and the disco music? Keith Dow, 28 Southton Mains Avenue, Edinburgh.

Snowball on Commodore 64. How do I open the security door in the pink and green alcove? A Sexton, 27 Oxford Street, Edinburgh.

Mountains of Ket jon Spectrum. I cannot fond the way through the skull's mouth in the cave. Ian White, Angell House, Bromham, Chippenham, Wilts.

Dark Dungeons on Vic20. Which room do I take the magic scroll to read it? Philip Sutwell, 112 Greenheam, Amington, Tamworth, Staffs.

Colditz on Spectrum. How do you get the wire cutters without getting killed? Jonathan Tait, 7 Grant Avenue, Colinton, Edinburgh.

Aztec Tomb on Commodore 64. I cannot get across the river — I keep drowning. Elizabeth Howell, 1 Ayton Court, Ayres Soad, Old Trafford, Manchester.

Planet of Death on Spectrum. How do I joperate the lift and the space ship? What is the meaning of 5,4 No dusty bin rules? LRo Hazmat, D158217Q, 3F Mess, HMS Berwick, BFPO Ships, London,

Heroes of Kara on Commodore 64. How do I get past the serpent? How do I get past the pirate? Do I need to get over the chasm? Chris Maltby, 128 Maidstone Drive, Wollaton, Nottingham.

Colossal Adventure on IBM. I can't reach the figure behind the window ■ don't understand the code). And, what does 'plover' mean? Ruud Gooeneweg, Essenburgsingel 67A, 3022 EB Rotterdam, The Netherlands.

New Releases

SPACEHOPPERS

A little while back Sinclair issued a number of games prepared for the Spectrum by a Japanese company called Hudsonsoft — just about the only company from Japan to do anything for the machine.

Now some of Hudsonsoft's MSX games have been issued here by Kuma. One of my favourites is *Eric and the Floaters* — an arcade game with a touch of originality about it.

The screen displays a maze in which lurk what look like spacehoppers — these bounce about harmlessly until they turn red when they chase you mercilessly. You can defend yourself by laying bombs which

explode after a few moments. The problem with this is that you are very likely to blow yourself to bits rather than the spacehoppers.

There isn't much else to the game besides blowing things up and running away, but for pure wacky destructiveness it's definitely good fun. Not only that, but by MSX standards it's cheap too.

Program *Eric and the Floaters*
Price *£8.95*

ANALYSIS

Moneywise is a home money management system for the BBC computer which should give you just about every facility you could possibly require — not only that but it's (by BBC software standards) cheap too.

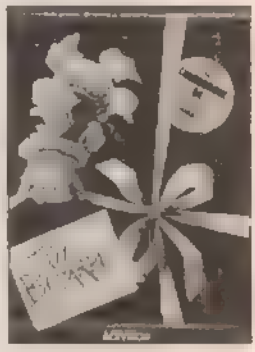
There are two sections to the program which allow for forecasting, analysis, summary and can display your finances in three dimensional bar charts.

Assuming your home is constantly plagued by industrial spies peeking into your finances you'll also be grateful for a password option which restricts access to your files. All the information can be saved to disc as can the program — a definite bonus which is still not a feature widely adopted by companies. You can even print out the bar charts — a neat program.

Program *Moneywise*
Price *£9.95*
Micro *BBC/Electron*
Supplier *Squirrel Software*
4 Bindloss Avenue
Eccles
Manchester M30 0DV

TOY REVOLT

Toy Bizarre is the latest Commodore game from Activision: it's another one of those multi things derived some-



where along the line from *Manic Miner*.

You are Marlon the Maintenance Man looking after the Gizmo Toy works (brilliantly inventive names, eh?) — the toys are in revolt. Well, they bounce and leap about and the balloons fill themselves up from various valves across the screen (you have to pop them).

Arch enemy is Hefty Hilda (alliteration!) who, naughty woman that she is, keeps turning the valves back on and letting the balloons fill up again. So it's basically one of those faster and faster until your fingers hurt type games which some people love and others hate. Original it isn't, and Hefty Hilda is quite possibly the worse in a long line of naff names that have been given to baddies in computer games over the years.

Program *Toy Bizarre*
Price *£9.95*
Micro *Commodore 64*

RENEGADE

Phoenix Software ■ best known for its arcade adventure packages where an arcade style game and an adventure were interlinked. Breaking away from this, Phoenix has released *In 1985*, a slightly bizarre arcade game which has something to do with Lech Walesa and Winston Smith. It is mainly quite a clever multi-screen game which costs a mere £4.99.

You are Lech, Polish trade union leader and must battle your way through 20 screens — like *Manic Miner* there is only one or at best, two ways through successfully, so precisely have the obstacles been designed. The obstacles are the trappings ■ totalitarian rule — secret policemen, cameras etc.

Lech's objective is to pick up various parts of a disguise which will enable him to pretend to be the dictator, instead of his radical renegade self. Political activists everywhere should rush out and buy it.

PANIC

Salamandar Software produced the *737 Flight Simulator* for the Dragon among other machines, and it became one of its most successful titles — now an MSX version has been issued by Mirrorsoft enhanced and adapted to support the extra facilities.

The program displays controls and h res graphics of the outside world. You can choose to fly by day or by night, set up your own runway layouts, simulate engine failure, etc, etc. In short you can produce genuine panic and anxiety as you plummet towards the earth for the 19th time.

There are a vast number of controls but it can be alleviated somewhat by the use of a joystick — all this with a manual too for a mere £9.95.

SYMPATHY

Shuttle Shock, it has to be said, has a certain charm about it.

For instance, a particularly nice touch is that the title has absolutely nothing to do with the game itself. Also it is quaintly old-fashioned, in that it looks like something about a year and a half old.

But most of all, it evokes a strange kind of melancholic sympathy...not only for those that have already spent £2.99 buying it. Not only for the few number of people that might enjoy playing it. But maybe most of all because it is the perfect example of a good idea badly implemented.

For those interested, you teleport (this is the good idea) from platform to platform on each screen, avoiding the oscillating nasties.

A sort of, low grade *Miner* with extra bounce.

Pick of the week

FAMILY GAME

Pettigrew's Diary and *Operation Safra* were two of the most popular of all Dragon programs with their unusual mix of graphics and adventure. Now the games have been adapted for other machines.

Although competition is obviously a lot tougher in the Spectrum market, Pettigrew still stands up as an entertaining release even if technically unsophisticated. For one thing it's on an epic scale being divided into four sections over two cassettes.

Operation Safras is divided into two parts: *The Searching* and *The Returning*. In the first you must find a mysterious sword and rescue five agents — there is a time limit and you may not enter part two before completing this section.

In the next section the sword must be returned to the Safras caves. Basically, there are eight small adventures each leading to the next. Both of these first parts are text adventures.

In *Pettigrews Diary* you must search around a blazing farmhouse and discover clues and listen to the dying words of the man inside — it has simple map style graphics. The rest of the adventure is text as you search London and beyond. Of part four I cannot speak since I've never seen it.

Shards are stressing that what they are trying to provide is 'good honest family entertainment' rather than mega games. This could be a cover up for a lack of sophistication, but I think it's largely justified. This could be a nice package to play together after Christmas lunch since it doesn't require the horribly devious thinking of some of the brain curdling text adventures nor the dexterity of some of the multi-screen arcade epics. It's fun, though, if your family is still talking to one another after Xmas lunch.

RIDDLE

Legend from Century Communications is said to be a follow up to epics like *Valhalla* and *The Hobbit*.

Certainly it comes in an *enormous* box and costs £14.95.

The package includes a one of those vast books chock-full of names like Druss (as in a load of) and Delnock Pass, a mighty fortress and innumerable concubines — sounds a bit like the Playboy organisation to me.

Anyway, there is the computer program based around, but not specifically on, the book. The first section is a vast (using every form of text compression under the sun) role-playing adventure in which you as Rek (as in, of the Hesperus) try to recruit leaders and regiments to defend Dros Delnoch (as in, a load of, again).

(wasn't he in the Millwall side that beat Benfica in '66?).

This part of the adventure involves wandering around, searching for objects and solving various riddles — eg: What can you give someone that they can't steal—by choosing the right options from a changing series of multiple-choice questions (quite a few old logic chestnuts thrown in here as in, one person lies always, another tells the truth always, how do you tell which is which, etc).

■ is mainly text but with occasional graphics and your score in this game affects your success in game two, The Siege of Dros Delnoch, which is essentially a complex strategy game with good, somethimes excellent graphics.

Legend is an unusual package, best seen rather as a complex but approachable wargame rather than a *Hobbit* follow up.

Pity about the silly names though.

CLEANING UP

After the unique and successful *Trashman*, New Generation has now released a sequel: *Travels with Trashman*. In this program Trashman has gone into private operation and is clearing up (literally and metaphorically) all over the world.

The game mixes strategy and arcade action as Trashman earns money by clearing rubbish from various scenic but dangerous locations. In Spain, Trashman enters the bull ring which is covered with roses from an adoring crowd celebrating the bullfight; you have to clear it without being biffed by a bull.

Other problems include New Orleans street bands, ferocious frogs, tears at the wailing wall and coconuts. Trashman passes from one section to the next by accumulating enough cash from his work. It's an amiable sort of game, lighthearted and that may put some alien bashers off but I liked it.

Program *Travels With Trashman*
Price *£5.95*

ANXIETY

The Love Oracle will change your life, it says on the box.

The Love Oracle ■ a combined book and program that uses the I Ching to sort out your emotional relationships. The main thing really is the book that reduces all anxieties about relationships to eight basic questions 'are we compatible?' 'do they love me?' etc — the computer program then works out the 'hexagram' — one of 64 six-line oracles.

Now being a bit of an I Ching buff myself, it worries me that you can consult it just be pressing keys on the computer — surely the whole business of shaking the coins or manipulating the yarrow stalks is supposed ■ be part of the mind calming exercise.

You'll either think the I Ching is a load of old baloney or you won't. If you don't you might find this package quite an interesting Christmas present.

New Releases is designed to let people know what software is coming on the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD

Addresses
ASK, London House, 68 Upper Richmond Rd, London **Acornsoft**, Betjeman House, 104 Hills Rd, Cambridge **Automata UK**, ■ Highland Road, Portsmouth, Hants **CSM** Suite 38, Strand House, Great West Rd, Brentford, Middx **Century Publishing**, Portland House, 12-13 Greek St, London **Interceptor Micro's**, Lindon House, The Green, Tadley, Hants. **Kosmos**, 1 Pilgrims Close, Harlington, Dunstable, Beds. **Micro Sign and Data Systems**, PO Box 60, Woking, Surrey **No Man's Land**, High Tech Units 1+2, Conlon, Waterlane, Darwen **Seven Stars**, 18 Gloucester Avenue, London **D Spencer**, 50 Cranswick Close, Billingham, Cleveland **Tynesoft**, Addison Industrial Estate, Blaydon-upon-Tyne, Tyne and Wear.

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Micro treatment

Dan Dare is set to join the computer age. At last. After years spent fighting the green skinned bulbous headed, Medon and similar alien insurgents, Dan Dare is to star in a computer game.

Virgin Games will release a program based on the very same hero of the recently resuscitated *Eagle* comic in the first half of next year. Versions of the game should be available initially on the Commodore 64, Amstrad and MSX machines.

This use of a comic strip character in a computer game is not an isolated occurence. Ever since the phenomenally successful Hobbit program was launched on the Spectrum by Melbourne House in 1982, an increasing number of film, TV, book and cartoon characters have been appearing in computer games.

Dr Who, The Hulk, Sherlock Holmes and even the Mr Man have all been converted into computer games of one form or another. Popular TV series such as *Dallas*, *The Fall Guy* and *Automan* are due to undergo the micro treatment. Even the classics have not been ignored, with a version of *Macbeth* appearing under the Creative Sparks label for the Commodore 64.

Most recently, Hutchinson announced at the Frankfurt Book Fair that it will be releasing a computer game based on Frederick Forsyth's new novel *The Fourth Protocol*, which has just been serialised in the *Mail on Sunday*.

However, with a few honourable exceptions, most of these computer games have been at best mediocre. The first Dr Who game released by the BBC, for example, was an uninspired arcade game which even its author regarded as boring.

The Hulk, which was produced by Scott Adams's Adventure International, has superb graphics, but is marred by poor on-screen presentation.

The possibilities for producing computer games based on best-selling books and films are almost limitless. Imagine the appeal of a really top-flight arcade game based around characters from *Indiana Jones and the Temple of Doom* or even something like *Company of Wolves*. Discover what it feels like to become Luke Skywalker and take on the might of the Empire's fleet.

Agatha Christie fans might like to try their hands at solving some of her cases, particularly if the solutions change each time you play. You may get bored re-reading a novel, because you already know the ending, but in a computer game you can have as many different endings — as the programmer allows — depending even on your own play.

But programs such as these will require an enormous investment in both time and money if they are to be done well. Individual freelance programmers are unlikely to have either the capital or the necessary all-round skills needed to create such sophisticated games.

Film and book publishers who want to make an impact on the software market should ally themselves with small teams of programmers who are used to working to budgets and deadlines.

In addition, these publishers should consider developing computer games while a new book or film is being made, rather than waiting for their completion before starting work on the game - Activision may come close with it's *Ghostbusters* game. There are obvious advantages in being able to advertise the film, the book of the film and the computer game at the same time.

Interestingly, Lucasfilms, the company which produced *Raidars of the Lost Ark* and the *Star Wars* trilogy, formed a partnership with Atari earlier this year. However, with Warners selling Atari to ex-Commodore boss Jack Tramiel for $240m in July, the fruits of this partnership have yet to be realised.

The computer movie is a phrase that is being overused in the micro press at the moment, but it may not be as far-fetched as it sounds. Films such as *War Games*, where a teenage American high-school student almost starts World War III by accident, already have home computer games based on them. *Tron* inspired a host of computer games featuring deadly light cycles and electronic frisbees.

It will be interesting to see if any computer games are spawned in the wake of *Electric Dreams*, an upcoming film about a boy, a girl...and a computer called Edgar. By coincidence, the music for the film has been provided by Virgin.

'Dan Dare? Great game...have you seen the film?'

Brendan Gore

A block problem

Puzzle No 131

That eccentric mathemarician, Professor Otto Hex, had just presented his young grandson with a set of wooden blocks. Typically, for the Professor, there was some numerical logic behind the gift.

"You see," he explained, "the number of blocks is what we call 'triangular' — that is they can be laid out in the form of a triangle — and yet they can also be laid out in th form of two squares."

By way of illustration he went on to explain that had there been ten blocks they could form a triangular pattern with 1, 2, 3 and 4 blocks to a row, and also a 3 × 3 and a 1 × 1 square arrangement. Similarly, had there been 48 blocks, there would have been enough for a triangle with nine tiers, or two squares — in this case a 6 × 6 and a 3 × 3 arrangement.

"In fact," added Professor Hex, "when he comes to arrange the two squares he will have a choice of no less than three different ways in which it can be done."

What is the smallest number of blocks that the Professor could have sent?

Solution to Puzzle 126

The number was 111999888. By adding one to this, 111999889 is equal to the square of 10583.

The program evaluates each set of numbers in sequence to try to find a result that is just one short of a perfect square.

```
10 FOR A = 1 TO 9 20 FOR B = 0 TO 9 30 IF A = B THEN
GOTO 80 40 FOR C = 0 TO 9 50 IF C = B OR C = A THEN
GOTO 110 60 LET N = A * 111000000 + B * 111000 + C *
111 70 LET N = N + 1 80 LT S = SQR(N) 90 LET S =
VAL(STR$(S)) 100 IF S = INT(S) THEN PRINT A,B,C,S
110 NEXT C 120 NEXT B 130 NEXT A
```

Winner of Puzzle No 126

The winner is S. McCarthy, Shelton Avenue, Newark, Notts, who receives £10.

Rules

If the puzzle can be sensibly solved using a computer, then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle 131 is November 16.

RAID OVER MOSCOW

commodore 64

The most breathtaking 3-D graphics yet seen on the Commodore 64!

Gripping arcade action

Multiple scrolling screens

The Soviets launch a nuclear strike against major cities in the United States and Canada. With our own nuclear arsenal dismantled, in accordance with the Salt IV Arms Agreement, the Soviets believe their treachery will lead to total world domination. Our only hope is our space station equipped with stealth bombers, which can fly undetected in Soviet airspace.

As squadron leader, you must lead your commandos on a virtual suicide mission, knock out the Soviet launch sites, and then proceed into the city of Moscow. Armed with only the weapons you can carry, you must seek and destroy the Soviet defence centre to stop the attack! Top multi-screen action!
